B.Tech in Artificial Intelligence and Data Science (Cyber Physical Systems and Security)

CURRICULUM 2025

GENERAL INFORMATION ABBREVIATIONS USED IN THE CURRICULUM

Cat - Category
L - Lecture
T – Tutorial
P - Practical
Cr - Credits
ENGG - Engineering Sciences (including General, Core and Electives)
HUM - Humanities (including Languages and others)
SCI - Basic Sciences (including Mathematics)
PRJ - Project Work (including Seminars)
AES - Aerospace Engineering
AIE - Computer Science and Engineering - Artificial Intelligence
BIO - Biology
CCE - Computer and Communication Engineering
CHE - Chemical Engineering
CHY - Chemistry
CSE - Computer Science and Engineering
CVL - Civil Engineering
CUL - Cultural Education
EAC - Electronics and Computer Engineering
ECE - Electronics and Communication Engineering
EEE - Electrical and Electronics Engineering
ELC - Electrical and Computer Engineering
HUM - Humanities
MAT - Mathematics
MEE - Mechanical Engineering
PHY - Physics

B.Tech. Artificial Intelligence & Data Science (Cyber Physical Systems and Security)

A 4-year professional degree conceived and designed for those who aspire to work with computers, computational modelling and artificial intelligence, for solving real-world problems in cyber physical systems and cyber security.

PROGRAM OUTCOMES FOR ENGINEERING

1. **Engineering knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems. Amrita Vishwa Vidyapeetham.

2. **Problem analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

3. **Design/development of solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

4. **Conduct investigations of complex problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

5. **Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

6. **The engineer and society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

7. **Environment and sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

8. **Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

9. **Individual and team work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

10. **Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

11. **Project management and finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

12. **Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAMME SPECIFIC OUTCOMES

Graduates of this program will be able to:

PSO1: Develop an in-depth understanding of the principles, mathematical concepts, tools and algorithms for modelling, controlling and securing Cyber Physical System.

PSO2: Apply AI principles in Cyber Physical data and analysis for its maintenance and its control.

PSO3: Use AI to design innovative solutions for making informed decisions based on data-driven insights, identify and execute projects applying AI and sensor data to cyber physical state estimation decisions.

SEMESTER I

Cat.	Course Code	Title	L T P	Credit
SCIENCE	25MAT106	Mathematics for Intelligence Systems 1	2 0 2	3
ENGG.	25AID101	Computational Thinking, programming and Problem Solving	2 0 2	3
ENGG.	25AIC102	Elements of Computing - 1	2 0 2	3
ENGG.	25EEE102	Fundamentals of Electrical and Electronics Engineering	2 0 2	3
HUM.	22AVP103	Mastery over mind	1 0 2	2
HUM.		Amrita Value Program 1	1 0 0	1
ENGG.	25AIC103	Introduction to Cyber Physical Systems and Control Theory - 1	2 0 2	3
HUM	23ENG101	Technical Communication	2 0 3	3
ENGG.		Micro Credential Course Set 1		4
		TOTAL		**25**

SEMESTER II

Cat.	Course Code	Title	L T P	Credit
SCIENCE	25MAT116	Mathematics for Intelligent Systems 2	2 0 2	3
ENGG.	25AID111	Introduction to data structures and Algorithms	2 0 2	3
ENGG.	25AIC112	Database Management Systems	2 0 2	3
ENGG.	25AID113	Introduction to AI and Machine Learning	2 0 2	3
ENGG.	25AIC114	Elements of Computing – 2 (Assembly Programming)	2 0 2	3
ENGG.	25AIC115	Introduction to Cyber Physical Systems and Control Theory - 2	2 0 2	3
HUM.		Amrita Value Program II	1 0 0	1
ENGG.	25AID116	User Interface Design	1 0 2	2
ENGG.		Micro Credential Course Set 2		4
		TOTAL		**25**

SEMESTER III

Cat.	Course Code	Title	L T P	Credit
SCIENCE	25MAT206	Mathematics for Intelligent Systems 3	2 0 2	3
ENGG.	25AIC201	Robotics for CPS	2 0 2	3
ENGG.	25AID202	Introduction to Computer Networks	2 0 2	3
ENGG.	25AIC203	Software-Defined Communications Systems	2 0 2	3
HUM.	22ADM101	Foundations of Indian Heritage	2 0 1	2
HUM.	23LSE201	Life Skills for Engineers 1	1 0 2	P/F
ENGG.	25AIC204	Cyber Physical System Design and Implementations	2 0 2	3
ENGG.		Micro Credential Course Set 3		4
		TOTAL		**21**

SEMESTER IV

Cat.	Course Code	Title	L T P	Credit
SCIENCE	25MAT216	Mathematics for Intelligent Systems 4	2 0 2	3
ENGG.	25AIC211	IoT (Sensing and Actuations)	2 0 2	3
ENGG.	25AIC212	Deep Learning Signal and Image Processing	3 0 2	4
ENGG.	25AIC213	Bigdata Management Systems	2 0 2	3
ENGG.	25AID214	Operating System	2 0 2	3
ENGG.	25AIC215	High-Performance and Cloud Computing	2 0 2	3
HUM.	22ADM111	Glimpses of Glorious India	2 0 1	2
HUM.	23LSE211	Life Skills for Engineers II	1 0 2	2
ENGG.		Micro Credential Course Set 4		4
		TOTAL		**27**

SEMESTER V

Cat.	Course Code	Title	L T P	Credit
SCIENCE	25MAT306	Mathematics for Intelligent Systems 5	2 0 2	3
ENGG.		Elective - 1	2 0 2	3
ENGG.		Elective - 2	2 0 2	3

ENGG.	25AIC499	Project Phase II		10
TOTAL				**10**

Microcredential courses

Semester 1, Microcredential courses Set 1	
Course Code	**Course Title**
25AIC121	Ecommerce and supporting technologies
25AIC122	Number theory for RSA algorithm
25AIC123	Computational discovery in Jupyter Notebooks
25AIC124	Introduction to Linux
Semester 2, Microcredential courses Set 2	
25AIC131	Introduction to Java with Cryptography
25AIC132	AES, ECC and hashing algorithms
25AIC133	Introduction to OOP
25AIC134	Introduction to Javascript – Playing with Chaos
Semester 3, Microcredential courses Set 3	
25AIC221	Introduction to UML & Design patterns in Java
25AIC222	Introduction to Blockchain technology
25AIC223	Introduction to TinyML
25AIC224	Introduction to ReactJS
Semester 4, Microcredential courses Set 4	
25AIC231	Introduction to Swift and Kotlin Programming
25AIC232	Introduction to malware & malware analysis
25AIC233	Embedded Systems
25AIC234	Introduction to smart grid and security
Semester 5, Microcredential courses Set 5	
25AIC321	Quantum Computing – Fundamentals
25AIC322	Quantum Machine Learning
25AIC323	Quantum Cryptography
25AIC324	Introduction to smart cities
Semester 6, Microcredential courses Set 6	
25AIC331	Water marking & steganography
25AIC332	Database / OS security
25AIC333	Ethical hacking & VAPT
25AIC334	Application and Web application security

Elective Courses

Course Code	Course Title
25AIC431	Network Security Testing
25AIC432	Advanced Ethical Hacking and Red Teaming
25AIC433	Secure Coding and Code Review
25AIC434	Cloud Security testing
25AIC435	IOT and OT Security Testing
25AIC436	Legal Aspects of Cyber Security
25AIC437	Breach Investigation and Forensics
25AIC438	Threat Intelligence and Hunting
25AIC439	Security Technology Administration and Management
25AIC440	Security Incident and Event Management
25AIC441	Security Governance, Risk and Compliance Management
25AIC442	Privacy, Business Continuity and IT Service Management
25AIC443	Malware Analysis and Reverse Engineering
25AIC444	Cyber security Economics
25AIC445	Agile Programming and DevSecOps
25AIC446	GRC Automation and Solutions Management
25AIC447	Hardware Security
25AIC448	Radio and Telecom Security Testing

Course evaluation pattern:

Assessment	Internal/External	Weightage (%)
Regular Tests (Minimum 5 to 10*)	Internal	50
Project review –(phase 1 and phase 2) / Midterm Examination	Internal	20
Final Project evaluation/ End Semester Examination	External	30

*The minimum number of assessments for 50 percent weightage will be decided by each campus and may vary from 5 to 10.

Courses offered under the framework of Amrita Values Programmes I and II

Table 3 New names for Amrita Value Programmes for UG programmes			
Course Code	**Title**	**L-T-P**	**Credits**

25MAT106	Mathematics for Intelligent Systems 1	L-T-P-C: 2- 0- 2- 3

Course Objectives

- To introduce students to the fundamental concepts and techniques of linear algebra, ordinary differential equations, probability theory, complex numbers, and quantum computing that are necessary for further study in science and related fields.
- To enable students to apply the concepts they learn in practical situations by using analytical and numerical methods to model real-world problems.
- To expose students to the wide range of applications of linear algebra, ordinary differential equations, probability theory, complex numbers, and quantum computing within the scientific field and to inspire them to pursue further study or research in these areas.
- To introduce students to the fundamental concepts of quantum computing
- To develop students' ability to communicate mathematical concepts and solutions clearly and effectively.

Course Outcomes

After completing this course, students will be able to

CO1	Apply the fundamental concepts of linear algebra and calculus to solve canonical problems analytically and computationally
CO2	Model and simulate simple physical systems using ordinary differential equations
CO3	Apply the concept of probability and random variables to solve elementary problems
CO4	Explain the basic concepts of quantum computing and differentiate it from conventional computing

CO-PO Mapping

CO4	3	-	-	-	-	-	-	-	3	2	3	3	2	-	-

Unit 1

Basics of Linear Algebra - Linear Dependence and independence of vectors - Gaussian Elimination - Rank of set of vectors forming a matrix - Vector space and Basis set for a Vector space – Dot product and Orthogonality -CR decomposition - Rotation matrices - Eigenvalues and Eigenvectors and its interpretation-Introduction to SVD- Computational experiments using Matlab/Excel/Simulink.

Unit 2

Ordinary Linear differential equations, formulation - concept of slope, velocity and acceleration - analytical and numerical solutions- Impulse Response computations- converting higher order into first order equations - examples of ODE modelling in falling objects, satellite and planetary motion, Electrical and mechanical systems–

Introduction to solving simple differential equations with Simulink- Introduction to one variable optimization - Taylor series- Computational experiments using Matlab /Excel/Simulink.

Unit 3

Introduction to random variables (continuous and discrete), mean, standard deviation, variance, sum of independent random variable, convolution, sum of convolution integral, probability distributions.

Unit 4

Introduction to quantum computing, Quantum Computing Roadmap, Quantum Mission in India, A Brief Introduction to Applications of Quantum computers, Quantum Computing Basics, Bracket Notation, Inner product, outer product, concept of state.

| 25AID101 | Computational Thinking, Programming and problem solving | L-T-P-C: 2- 0- 2- 3 |

Course Objectives

- Provide an insight on the importance of computational thinking
- Help to develop skills to solve problems using spreadsheet and matlab
- Provide logical thinking capabilities to solve problems .

Course Outcomes

After completing this course, students will be able to

CO1	Develop critical thinking
CO2	Apply logical thinking to solve problems
CO3	Develop skills to use spreadsheet for problem solving
CO4	Develop skills to use matlab for problem solving

CO-PO Mapping

CO4	2	3	-	2	2	-	-	-	-	-	-	-	1	2	1

Unit 1

Computational Thinking, critical thinking, data representation, abstraction, decomposition- breaking problems into parts, basic data types, pseudocode, algorithms-methods to solve the problems, brute-force or exhaustive search problems, divide and conquer problems

Unit 2

Computational Thinking using spreadsheets, basic operations, cell references – relative and absolute, lookup operations, implement fractals – newton, Sierpinski triangle, L-system fractals, solve calculus based problems using spreadsheet, using spreadsheet for solving probability related problems

Unit 3

Computational thinking using matlab, basic operations, plotting of vectors, array and matrix operations, implement fractals – newton, Sierpinski triangle, L-system fractals, solve calculus based problems using matlab, using matlab for solving probability related problems

25AIC102	Elements of Computing - 1	L-T-P-C: 2- 0- 2- 3

Course Objectives

- The course will introduce the principles of number system conversions, Boolean logic, logic gates, and Boolean algebra.
- The course will aid the students in the design and analysis of combinational and sequential logic circuits.
- The course will also equip students to build a general-purpose computing system using elementary NAND gates through a simulation software

Course Outcomes

After completing this course, students will be able to

CO1	Demonstrate proficiency in performing number system conversion, manipulating Boolean Algebra expressions and realization of basic gates .
CO2	Implement different combinational logic circuits.
CO3	Implement different sequential logic circuits
CO4	Build a general-purpose computer using elementary NAND gates through a simulation software

Syllabus

Unit 2

Number System, Conversions, Signed and Unsigned Binary Number Representation, Boolean algebra and Karnaugh Maps, Logic gates, Realization of basic gates using universal gates, Boolean function synthesis, Introduction to Hardware simulator platform Nand2teris, Hardware description language, Implementation of basic gates and its multi-bit and multiway versions in Nand2teris software suite.

Unit 2

Combinational Logic, Half Adder, Full Adder, Multiplexer and demultiplexer, Multi-bit and Multiway versions, Realization of Boolean functions using combinational logic, Arithmetic logic unit (ALU)- specification, design, Sequential logic, Flip Flops, Registers, RAM, ROM.

Unit 3

Von-Neumann architecture, Program Counter, Central Processing unit, Data Memory, Hack machine language specifications/ instructions for CPU design, Hack CPU Design, CPU Control logic, building a Hack Computer.

25EEE102	Fundamentals of Electrical and Electronics Engineering L-T-P-C: 2- 0- 2- 3

Course Objectives:

- Develop a solid understanding of the fundamental principles of electrical engineering, including circuit analysis, electronic components, and their applications in medical devices.

- Apply knowledge of electronic circuits and signal processing techniques to design and analyze circuits used in cyber physical systems, ensuring their relevance and effectiveness in various applications of   cyber physical systems.

- Integrate sensors and actuators effectively into cyber physical systems, demonstrating the ability to select, interface, and troubleshoot these components for optimal functionality

Course Outcomes:

CO1	Familiarize the fundamental concepts in electrical and electronics engineering
CO2	Implement the state-of-the-art computational techniques that can be employed to analyse the structured problems in electrical engineering.
CO3	Realize basic electronic components and circuits using various semiconductor devices
CO4	Implement various circuits applications in the perspective of electronics.

Syllabus:

Unit: Fundamental electrical laws-Fundamental circuit elements: charge, voltage, current – Resistance – Ohms law –Kirchhoff's voltage and current law – Energy and power – Series parallel combination of R, L, C components –Voltage divider and current divider rules – Super position theorem – Inductors and capacitors – Impedance and AC sinusoidal signals.

Unit 2: Semiconductor materials – PN junction diode – Diode characteristics – Diode applications: Clippers and Clampers– Rectifiers: Half wave, Full wave, Bridge – Zener diode –Introduction to BJT–BJT characteristics and configurations – CE amplifier – Transistor as a switch – Filed effect transistors: MOSFET

Unit 3: Operational amplifiers – Inverting and non-inverting amplifier – Oscillators –Instrumentation amplifier

| 25AIC103 | Introduction to Cyber Physical Systems and Control Theory - 1 | L-T-P-C: 2- 0- 2- 3 |

Course Objectives:

- Understand Modeling Analogies – Develop an understanding of the fundamental concepts and components of modeling analogies across electrical, mechanical, fluid, and thermal domains.
- Analyze Balance Equations – Apply force balance, voltage balance, pressure balance, and energy balance principles to model physical systems.
- Compare Physical Components Across Domains – Explore analogies between springs and capacitors, resistors and dampers, inductors and masses, as well as pipes, resistors, and heat conductors.
- Model Complex Systems – Construct models for systems consisting of multiple springs, resistors, and pipes and analyze their analogous arrangements.

Course outcomes

CO1	Demonstrate Understanding of Analogies
CO2	Apply Fundamental Balance Equations
CO3	Identify and Compare System Components
CO4	Construct and Analyze Analogous Systems

CO PO Mapping

PO/ PSO	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3

CO4	3	3	3	3	2	-	-	-	2	2	3	2	2	2	-

Syllabus:

Unit 1

Modelling analogies: concepts and components, Force balance, Voltage balance , Pressure balance , Energy Balance.

Springs and capacitors, Resistors and dampers, Inductors and masses.

Unit 2

Pipes and resistors and heat conductors. System of springs, Resisters, pipes. analogous arrangements.

 Linearity and non-linear systems. Modelling First order systems.

Unit 3

Simple Electrical circuits, Mechanical systems , Fluid systems, Thermal systems analogous arrangements

Responses to first order systems. Using MATLAB for solving

1. Course Overview

Master Over the Mind (MAOM) is an Amrita initiative to implement schemes and organise university-wide programs to enhance health and wellbeing of all faculty, staff, and students (UN SDG -3). This program as part of our efforts for sustainable stress reduction gives an introduction to immediate and long-term benefits and equips every attendee to manage stressful emotions and anxiety facilitating inner peace and harmony.

With a meditation technique offered by Amrita Chancellor and world-renowned humanitarian and spiritual leader, Sri Mata Amritanandamayi Devi (Amma), this course has been planned to be offered to all students of all campuses of AMRITA, starting off with all first years, wherein one hour per week is completely dedicated for guided practical meditation session and one hour on the theory aspects of MAOM. The theory section comprises lecture hours within a structured syllabus and will include invited guest lecture series from eminent personalities from diverse fields of excellence. This course will enhance the understanding of experiential learning based on university's mission: "Education for Life along with Education for Living", and is aimed to allow learners to realize and rediscover the infinite potential of one's true Being and the fulfilment of life's goals.

Course Syllabus

Unit 1

Causes of Stress: The problem of not being relaxed. Need for meditation -basics of stress management at home and workplace. Traditions and Culture. Principles of meditation– promote a sense of control and autonomy in the Universal Human Value System. Different stages of Meditation. Various Meditation Models. Various practices of Meditation techniques in different schools of philosophy and Indian Knowledge System.

Unit 2

Improving work and study performance. Meditation in daily life. Cultivating compassion and good mental health with an attitude of openness and acceptance. Research and Science of Meditation: Significance of practising meditation and perspectives from diverse fields like science, medicine, technology. philosophy, culture, arts, management, sports, economics, healthcare, environment etc. The role of meditation for stress and anxiety reduction in one's life with insights based on recent cutting-edge technology. The effect of practicing meditation for the wholesome wellbeing of an individual.

Unit 3

Communications: principles of conscious communication. Relationships and empathy: meditative approach in managing and maintaining better relationships in life during the interactions in the world, role of MAOM in developing compassion, empathy and responsibility, instilling interest, and orientation to humanitarian projects as a key to harness intelligence and compassion in youth. Methodologies to evaluate effective awareness and relaxation gained from meditation. Evaluating the global transformation through meditation by instilling human values which leads to service learning and compassion driven research.

2. Evaluation and Grading

Internal			External	Total
Components	*Weightage*		Practical (attendance and class participation) 60%	100%
Quizzes(based on the reading material)	20%	40%		
Assignments (Based on webinars and lecture series)	20%			

3. Course Outcomes (CO)

CO1: Relate to the causes of stress in one's life.

CO2: Experiment with a range of relaxation techniques CO3: Model a meditative approach to work, study, and life.

CO4: Develop appropriate practice of MA-OM technique that is effective in one's life CO5: Inculcate a higher level of awareness and focus.

CO6: Evaluate the impact of a meditation technique

23ENG101	Technical Communication	L-T-P-C: 2-0-3-3

Course Objective:

Learn the fundamentals of mechanics of writing
Acquire the ability to draft formal correspondence and various technical documents
Develop abilities in critical thinking and analysis
Acquire skills of scanning for specific information, comprehension, and organization of ideas
Enhance competency in technical presentation skills

Course Outcomes

CO1: Apply the mechanics of writing in formal correspondence

CO2: Write technical documents with appropriate form and content

CO3: Organize technical information or ideas in a logical and coherent manner

CO4: Compose grammatically and stylistically accurate project reports/ term papers

CO5: Make effective technical presentations

CO-PO Mapping

PO/PSO CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1										3					
CO2				1						2					
CO3										3					
CO4				1						2					
CO5									2	1					

Syllabus

Unit 1
Error Analysis
Mechanics of Writing: Grammar rules -articles, tenses, auxiliary verbs (primary & modal) prepositions, subject-verb agreement, pronoun-antecedent agreement, discourse markers and sentence linkers, impersonal passive, modifiers, phrasal verbs
General Reading and Listening comprehension - rearrangement & organization of sentences

Unit 2
Different kinds of written documents: Definitions- Descriptions- Instructions-Recommendations- User manuals - Reports – Proposals
Formal Correspondence: Writing Formal Letters/Emails
Punctuation
Scientific Reading & Listening Comprehension
Unit 3
Technical paper writing: Documentation style - Document editing – Proof reading - Organizing and Formatting

Tone and style
Graphical representation
Reading and listening comprehension of technical documents
Mini Technical project / Term paper (10 -12 pages)
Technical presentations

25MAT116	Mathematics for Intelligent Systems 2	L-T-P-C: 2- 0- 2- 3

Course Objectives

- To introduce students to the fundamental concepts of linear algebra, differential equations, optimization, and probabilistic modelling
- To enable students to apply the concepts they learn in practical situations by using analytical and numerical methods to model real-world problems.
- To expose students to the wide range of applications of linear algebra, ordinary differential equations, probability theory, and quantum computing within the scientific field and to inspire them to pursue further study or research in these areas.
- To equip students with advanced mathematical knowledge and problem-solving skills highly valued in various industries and research fields.

Course Outcomes

After completing this course, students will be able to

CO1	Implement matrix decomposition techniques to solve linear systems of equations.
CO2	Formulate optimization problems and solve them using gradient based and Newton's methods
CO3	Analyse data using fundamental techniques of probability.
CO4	Explain quantum entanglement, qubits and state vectors

CO-PO Mapping

PO/ PSO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CO3	3	3	3	2	3	-	2	-	3	2	3	3	3	2	-
CO4	3	-	-	-	-	-	-	-	3	2	3	3	2	-	-

Syllabus

Unit 1

Gaussian elimination – LU decomposition – Vector spaces associated with Matrices- Special orthogonal matrices - Fourier Series and Fourier Transform and its properties – Convolution - Projection matrix and Regression - Convolution sum - Convolution Integral - Eigenvalues and Eigenvectors of Symmetric matrices - Eigenvalues and Eigen vectors of ATA, AAT - Relationship between vector spaces associated with A, ATA, AAT- Singular Value Decomposition – Concept of Pseudoinverse- Computational experiments using MATLAB/Excel/Simulink

Unit 2

Taylor series expansion of multivariate functions-conditions for maxima, minima and saddle points-Concept of gradient and Hessian matrices- Impulse Response computations- converting higher order into first order

equations – concept of eAT- Multivariate regression and regularized regression -Theory of convex and non- convex optimization-Newton method for unconstrained optimization- Signal processing with regularized regression- Computational experiments using MATLAB/Excel/Simulink

Unit 3

Random variables and distributions - Expectation, Variance, Moments, Cumulants- Moment generating functions - Sampling from univariate distribution- various methods - Bayes theorem, Concept of Jacobian, and its use in finding pdf of functions of Random variables (RVs), Box-muller formula for sampling normal distribution - Concept of correlation and Covariance of two linearly related RVs.

Unit 4

Introduction to quantum computing–Introduction to spin – state vectors – Qubits – Entanglement. Measurement in Quantum Mechanics.

25AID111   **Introduction to data structure and algorithms**   **2-0-2 3**

Course Objectives

- This course aims to introduce students to the concept of data structures, and demonstrate how the use of appropriate data structures will improve the efficiency of algorithms.
- Students will implement various simple data structures and apply them to solve real world scenarios.
- Along the way, students will learn to think about problems recursively and use modular programming.

Course Outcomes

After completing this course, the student should be able to

CO1: Apply modular design to write simple, correct and recursive programs.

CO2: Apply elementary mathematical concepts to prove the correctness and analyze the complexity of algorithms.

CO3: Design and implement simple augmented data structures to model various real world scenarios.

CO4: Use appropriate data structures to write efficient algorithms.

Syllabus:

Unit 1: Data Structure – primitive and non-primitive, Array data structure, properties and functions, single and multiidimensional arrays, simple problems, Basics of Algorithm Analysis, big-Oh notation, notion of time and space complexity, dynamic arrays

Unit 2: Linked List - singly linked list, doubly linked list, circular linked list- properties and functions, implementations, sorting algorithms – selection, bubble, insertion, quick sort, merge sort, comparison of sorting algorithms, implementation using arrays.

Unit 3: Stack data structure, properties and functions, recursion, expression evaluation, Queue data structure - circular queue, double ended queue, properties, and functions

Unit 4: Binary Tree– arrays and linked list representation, tree traversals-preorder, postorder, inorder, level order. Graphsdirected and undirected graphs, adjacency list and matrices, Incidence matrices, path, graph traversals – breadthfirst and depth-first, Shortest path- Dijkstra's algorithm, Bellman-Ford algorithm, Floyd-Warshall algorithm.

| 25AIC112 | Database Management Systems | L-T-P-C: 2- 0- 2- 3 |

Course Objectives

- This course aims to understand the concepts of database design, database languages, database-system implementation and maintainance
- The course will provide knowledge of the design and development of databases for AI applications using SQL and python
- The course will provide an understanding of various databases system including modern databases systems apt for AI and ML applications

Course Outcomes

After completing this course, students will be able to

CO1	Formulate relational algebraic expressions, SQL and PL/SQL statements to query relational databases.
CO2	Build ER models for real world databases.
CO3	Design a normalized database management system for real world databases.
CO4	Apply the principles of transaction processing and concurrency control
CO5	Use high-level right database for AI and ML applications .

CO-PO Mapping

CO5	1	1	-	-	-	-	-	-	-	-	-	-	-	1	2

Syllabus

Unit 1

Introduction: Overview of DBMS fundamentals – Overview of Relational Databases and Keys. Relational Data Model: Structure of relational databases – Database schema – Formal Relational Query Languages – Overview of Relational Algebra and Relational Operations. Database Design: Overview of the design process - The E-RModels – Constraints - Removing Redundant Attributes in Entity Sets - E-R Diagrams - Reduction to Relational Schemas - Entity Relationship Design Issues - Extended E-R Features – Alternative E-R Notations – Overview of Unified Modelling Language (UML).

Unit 2

Relational Database Design: Features of Good Relational Designs - Atomic Domains and 1NF – Decomposition using Functional Dependencies: 2NF, 3NF, BCNF and Higher Normal Forms. Functional Dependency Theory - Algorithm for Decomposition – Decomposition using multi-valued dependency: 4NF and 4NF decomposition. Database design process and its issues. SQL: review of SQL – Intermediate SQL – Advanced SQL.

Unit 3

Transactions: Transaction concept – A simple transaction model - Storage structure - Transaction atomicity and durability - Transaction isolation – Serializability – Recoverable schedules, Casecade less schedules. concurrency control: Lock-based protocols – Locks, granting of locks, the two-phase locking protocol, implementation of locking, Graph-based protocols. Deadlock handling: Deadlock prevention, Deadlock detection and recovery. Case Study: Different types of high-level databases – MongoDB, Hadoop/Hbase, Redis, IBM Cloudant, Dynamo DB, Cassandra and Couch DB etc. Tips for choosing the right database for the given problem.

25AIC114	Elements of Computing – 2 (Assembly Programming)	L-T-P-C: 2- 0- 2- 3

Course Objectives

- This course aims to provide an integrative, project-oriented approach to build software layers of a general-purpose computer system.
- The course will take the students through a series of software-layer construction tasks.
- This course will demonstrate how theoretical and applied techniques taught in other computer science courses are used in practice.

Course Outcomes

After completing this course, students will be able to

CO1	Develop and execute programs in low-level languages such as Hack machine language and assembly language
CO2	Create virtual machine specification or VM code for high-level and assembly languages
CO3	Develop programs in object-based language 'Jack'
CO4	Execute experiments related to basic concepts and functions of operating systems/compilers

25AIC115   Introduction to Cyber Physical Systems and Control Theory - 2   2-0-2-3

Course Objectives:

- Understand First-Order System Modeling – Develop mathematical models for first-order electrical, mechanical, fluid, and thermal systems using analogous representations.
- Analyze First-Order System Responses – Evaluate the transient and steady-state behavior of first-order systems under various inputs.
- Model and Analyze Second-Order Systems – Understand and analyze the responses of second-order systems, including concepts of damping, natural frequency, and stability.
- Apply Laplace Transform in System Analysis – Utilize the Laplace Transform for system modeling, solving differential equations, and analyzing dynamic system behavior.

Course outcomes

CO1	Develop Mathematical Models for first-order system models for electrical, mechanical, fluid, and thermal systems using analogous principles.
CO2	Analyze System Responses.
CO3	Apply Laplace Transform Techniques and analyse dynamic behaviour in the frequency domain.
CO4	Evaluate Second-Order System Characteristics.

| 25AID116 | User Interface Design | L-T-P-C: 1- 0- 2- 2 |

Course Objectives

- Focus in this course is on the basic understanding of user interface design by applying HTML, CSS and Java Script.
- On the completion of the course, students will be able to develop basic web applications.
- This course will serve as the foundation for students to do several projects and other advanced courses in computer science.

Course Outcomes

After completing this course, students will be able to

CO1	Apply the basics of World Wide Web concepts during web development.
CO2	Develop webpage GUI using HTML5 technology.
CO3	Develop GUI using CSS and Java Scrip
CO4	Develop a simple web application using html, CSS and JavaScript.

25MAT206	Mathematics for Intelligent Systems 3	L-T-P-C: 2- 0- 2- 3

Course Objectives

- To provide students with advanced knowledge and skills in optimization, PDEs, probability and statistics, and quantum computing.
- To develop students proficiency in solving real-world problems in various domains, including physics, engineering, and computer science using the concepts of optimization, PDEs, and probability.
- To apply the concepts and techniques learned in the course to solve complex problems and communicate their solutions effectively to both technical and non-technical audiences.
- To equip students with advanced mathematical knowledge and problem-solving skills highly valued in various industries and research fields.

Course Outcomes

After completing this course, students will be able to

CO1	Apply the fundamental techniques of optimization theory to solve data science problems.
CO2	Analyse and solve computationally, physical systems using the formalism of partial differential equations.
CO3	Apply Markovian concepts in stochastic sequential systems.
CO4	Explain Bells Inequality and Quantum gates.

CO-PO Mapping

CO4	3	-	-	-	-	-	-	-	3	2	-	3	2	-	3

Syllabus

Unit 1

Direct methods for convex functions - sparsity inducing penalty functions- Constrained Convex Optimization problems - Krylov subspace -Conjugate gradient method - formulating problems as LP and QP - Lagrangian multiplier method-KKT conditions - support vector machines- solving by packages (CVXOPT) - Introduction to RKS - Introduction to DMD-Tensor and HoSVD- Linear algebra for AI.

Unit 2

Introduction to PDEs - Formulation and numerical solution methods (Finite difference and Fourier) for PDEs in Physics and Engineering- Computational experiments using Matlab/Excel/Simulink.

Unit 3

Multivariate Gaussian and weighted least squares - Markov chains - Markov decision Process

Unit 4

Introduction to quantum computing-Bells inequality-Quantum gates

Bernhardt, Chris. Quantum computing for everyone. Mit Press, 2019. (From pages 71 to 140).

Course Objectives

- This course aims to provide students with an overview of concepts to applications of robotics.
- This course intends to equip students with the ability to design and analyze simple and elementary robotic systems (Upto 4 DOF systems like SCARA) using mathematical and computational tools.
- This course aims to give students elementary hands-on experience in programming robotic systems using Robotic Toolbox in python/Matlab.

Course Outcomes

After completing this course, students will be able to

CO1	Explain facts pertaining to robotics including history, sub-fields, and applications.
CO2	Explain the elementary concepts required for modelling robotic systems.
CO3	Develop mathematical and mechanistic models for simple robotic systems.
CO4	Use tools such as Robotics toolbox to program and visualize simple robotic systems

CO-PO Mapping

CO4	2	2	1	1	3	-	-	-	2	2	-	2	1	1	2

Syllabus

Unit 1 Overview of Robotics

Definition and History of Robots, Applications of robots, Current trend in robotics, Basic mathematics for robotics – Vectors, Matrices and Linear Algebra concepts, Rigid body transformations – Translation and Rotation, Homogeneous Transformation matrix.

Unit 2 Kinematics of Simple Robotic Systems

Forward Kinematics of simple industrial robotic systems, Inverse kinematics of simple industrial robotic systems, Differential Kinematics of simple industrial robotic systems, Kinematics of simple wheeled mobile robots.

Unit 3 Dynamics and Control of Simple Robotic Systems

Introduction to rigid body kinetics, Euler-Lagrange equation of simple robotic systems, Forward and Inverse dynamics of simple robotic systems, Velocity based control of simple robotic systems, Torque based control of robotic systems.

Spong M.W., Hutchinson S. and Vidyasagar M, Robot Modeling and Control, Wiley, 2006

Saha S K, Introduction to Robotics, McGraw Hill publishing, 2014

Course Objective

- This course helps students to understand the fundamental networking concepts and standards.
- This course helps students to understand the function of TCP/IP layers and the protocols involved.
- This course helps students to understand the configuration of different networks and routing using simulator/emulator.
- This course helps students to understand the importance and application of artificial intelligence in computer networks
- This course gives an introduction to the concepts of software defined networks and its applications.

Course Outcomes

After completing this course, students will be able to

CO1	Analyze the requirements for a given organizational structure to select the most appropriate networking architecture and technologies.
CO2	Analyze the working of protocols in the internet protocol stack for network applications.
CO3	Configure a router using simulator/emulator.
CO4	Analyze the network data to detect potential security threats in a network

CO4	1	1	1	2	2	1	-	1	-	-	-	2	1	-	1

Syllabus

Unit 1

Basic concepts of computer networks, Internet- network edge, network core, delay, loss, and throughput in packet switched networks, network topology, types of networks, Internet standards and organization. OSI layer stack, protocols in the context of the Internet protocol stack. Introduction to AI powered networks that monitor the connected devices and their bandwidth requirements

Unit 2

Application Layer – Protocols in Web and Email applications, Peer-to-Peer Applications. Transport Layer – connection-oriented and connectionless service, protocols, and socket programming. Network Layer – Internet Protocol, Host Addressing for subnets, Routing and Forwarding principles. Data link and Physical layer concepts for wired and wireless network

Unit 3

Network security- analyze the network traffic. Introduction to Software Define Networks

25AIC203	Software-Defined Communication Systems	L-T-P-C: 2- 0- 2- 3

Course Objectives

- Understand the basic principles of communication systems, including signal analysis, system characteristics, and different types of modulation/demodulation techniques.
- Develop practical skills in using SDR platforms and tools such as MATLAB Simulink, GNU Radio Companion, RTL- SDR, and Adalm Pluto to implement analog and digital modulation/demodulation techniques and analyse signals/spectra.

Course Outcomes

After completing this course, students will be able to

CO1	Analyse different signal attributes related to communication system
CO2	Design and implement basic analog communication techniques using software defined radio platforms
CO3	Design and implement basic digital communication techniques using software defined radio platforms
CO4	Develop an appreciation of the role of AI in communication systems

CO-PO Mapping

CO4	3	3	3	3	3	3	-	2	3	3	3	3	1	2	3

Syllabus

Unit 1

Introduction to communication systems, introduction to signals, different types of signals and their characteristics, concept of system, linear time-invariant (LTI) system, sinusoids- concept of frequency, in-phase and quadrature component, bandwidth, pass band and stop band, Introduction to SDR platforms and devices- MATLAB Simulink and GNU radio Companion (GRC), RTL-SDR and Adalm Pluto. Signal analysis/ spectrum analysis and visualization using SDR tools.

Unit 2

Need for modulation, analog modulation schemes, amplitude modulation (AM) and its types - AM-DSB-SC, AM-DSB-TC, SSB. AM Demodulation schemes, angle modulation- frequency modulation (FM) -Narrowband and wideband, phase modulation, FM demodulation, implementation of analog modulation/demodulation schemes using SDR tools.

Unit 3

Quadrature amplitude modulation and demodulation, pulse analog modulation schemes, digital carrier modulation/demodulation Schemes- amplitude shift keying (ASK), frequency shift keying (FSK), phase shift keying (PSK), M-ary signalling, BPSK, QPSK, implementation of digital modulation/demodulation schemes using SDR tools. Multicarrier modulation- OFDM, MIMO, Prospects of AI in communication system- radio signal or modulation classification.

22ADM101   **Foundations of Indian Heritage**   **L-T-P-C: 2- 0- 1-2**
Syllabus

Unit 1 – Unit 4

Educational Heritage of Ancient India Life and Happiness

Impact of Colonialism and Decolonization A timeline of Early Indian Subcontinent

Unit- 5 - 8

Pinnacle of Selflessness and ultimate freedom Indian approach towards life

Circle of Life

Ocean of love; Indian Mahatmas.

Unit 9 - 13

Man's association with Nature Celebrating life 24/7.
Metaphors and Tropes

Become A Strategic Thinker (Games / Indic activity) India: In the Views of Other Scholars and Travellers

Unit 14-16

Personality Development Through Yoga.

Hallmark of Indian Traditions: Advaita Vedanta, Theory of oneness Conversations on Compassion with Amma

23LSE201	Life Skills for Engineers I	1 0 2 P/F

Course Objective

- Assist students in inculcating Soft Skills and developing a strong personality
- Help them improve their presentation skills
- Support them in developing their problem solving and reasoning skills
- Facilitate the enhancement of their communication skills

Course Outcomes

After completing this course, students will be able to

CO1	Soft Skills: To develop greater morale and positive attitude to face, analyse, and manage emotions in real life situations, like placement process.
CO2	Soft Skills: To empower students to create better impact on a target audience through content creation, effective delivery, appropriate body language and overcoming nervousness, in situations like presentations, Group Discussions and interviews.
CO3	Aptitude: To analyze, understand and employ the most suitable methods to solve questions on arithmetic and algebra.
CO4	Aptitude: To investigate and apply suitable techniques to solve questions on logical reasoning and data analysis.
CO5	Verbal: To infer the meaning of words and use them in the right context. To have a better understanding of the basics of English grammar and apply them effectively.
CO6	Verbal: To identify the relationship between words using reasoning skills. To develop the capacity to communicate ideas effectively.

CO-PO Mapping

PO/ PSO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CO6	-	-	-	-	-	-	-	-	3	3	-	3	-	-	-

Syllabus

Soft skills and its importance: Pleasure and pains of transition from an academic environment to work-environment. New-age challenges and distractions. Learning to benefit from constructive criticisms and feedback, Need for change in mindset and up-skilling to keep oneself competent in the professional world.

Managing Self: Knowing oneself, Self-perception, Importance of positive attitude, Building and displaying confidence, Avoiding being overconfident, Managing emotions, stress, fear. Developing Resilience and handling failures. Self-motivation, Self-learning, and continuous knowledge up-gradation / Life-long learning. Personal productivity - Goal setting and its importance in career planning, Self-discipline, Importance of values, ethics and integrity, Universal Human Values.

Aptitude

Problem Solving I
Numbers: Types, Power Cycles, Divisibility, Prime, Factors & Multiples, HCF & LCM, Surds, Indices, Square roots, Cube Roots and Simplification.
Percentage: Basics, Profit, Loss & Discount, and Simple & Compound Interest. **Ratio, Proportion & Variation:** Basics, Alligations, Mixtures, and Partnership. **Averages**: Basics, and Weighted Average.
Data Interpretation: Tables, Bar Diagrams, Venn Diagrams, Line Graphs, Pie Charts, Caselets, Mixed Varieties, Network Diagrams and other forms of data representation.

Verbal

Vocabulary: Familiarize students with the etymology of words, help them realize the relevance of word analysis and enable them to answer synonym and antonym questions. Create an awareness about the frequently misused words, commonly confused words and wrong form of words in English.
Grammar (Basic): Help students learn the usage of structural words and facilitate students to identify errors and correct them.
Reasoning: Stress the importance of understanding the relationship between words through analogy questions.
Speaking Skills: Make students conscious of the relevance of effective communication in today's world through various individual speaking activities.

25AIC204   **Cyber Physical System Design and Implementations**   **2-0-2-3**

Course Objectives:

- Understand State-Space Methods – Learn state-space representation of dynamic systems and its applications in control system design.

- Apply Modeling Principles – Develop mathematical models of cyber-physical systems (CPS) using fundamental modeling techniques.

- Explore Dynamic Mode Decomposition (DMD) – Understand and apply DMD for extracting dynamic patterns from system data.

- Analyze System Observability and Controllability – Evaluate the ability to observe and control states in state-space models.

Course outcomes

CO1	Develop State-Space models to represent dynamic systems in state-space form and analyze their behavior.
CO2	Apply Dynamic Mode Decomposition to extract system dynamics from empirical data.
CO3	Evaluate System Observability and Controllability
CO4	Design Predictive Control Strategies for CPS applications.

CO-PO Mapping

SEMESTER 4

25MAT216	Mathematics for Intelligent Systems 4	L-T-P-C: 2- 0- 2- 3

Course Objectives

- To provide students with advanced knowledge and skills in optimization, statistical estimation theory, and quantum computing.
- To understand and analyze special matrices used in various areas of signal processing and data analysis.
- To learn optimization techniques for convex and non-convex problems, and their application to machine learning problems.
- To introduce statistical estimation theory and hypothesis testing, and their relevance to data analysis.
- To provide an overview of quantum computing and its potential applications in various field

Course Outcomes

After completing this course, students will be able to

CO1	Apply proximal algorithms, augmented Lagrangian, and ADMM to solve convex and non-convex optimization problems.
CO2	Develop optimization algorithms used in neural networks.
CO3	Apply statistical estimation theory and hypothesis testing to data analysis applications.
CO4	Apply quantum computing concepts to solve problems in various fields including cryptography and optimization.

CO4	3	3	3	1	3	-	-	2	3	2	2	3	2	-	3

Syllabus

Unit 1

Special Matrices: Fourier Transform, discrete and Continuous, Shift matrices and Circulant matrices, The Kronecker product, Toeplitz matrices and shift invariant filters, Hankel matrices, DMD and need of Hankelization - Importance of Hankelization – DMD and its variants - Linear algebra for AI

Unit 2

Matrix splitting and Proximal algorithms - Augmented Lagrangian- Introduction to ADMM, ADMM for LP and QP - Optimization methods for Neural Networks: Gradient Descent, Stochastic gradient descent- loss functions and learning functions.

Unit 3

Basics of statistical estimation theory and testing of hypothesis.

Unit 4

Introduction to quantum computing- Bells's circuit, Superdense coding, Quantum teleportation. Programming using Qiskit, Matlab.

25AIC211	IoT(Sensing and Actuations)	L-T-P-C: 2- 0- 2- 3

Course Objectives

- To provide hands-on experience in IoT concepts such as sensing, actuation, and communication.
- To develop program skills in Arduino and Raspberry-PI programming for IoT applications.
- To introduce the process of interfacing actuators and sensing devices to Arduino and Raspberry PI.
- To impart the knowledge of networking concepts that enable wired and wireless communication among devices for IoT applications.
- To introduce cloud platforms for storing and implementing IoT applications.

Course outcomes

Upon completion of the course, students will be able to,

CO1	Familiarize with the fundamental concepts of Internet of Things. .
CO2	Develop skills in programming and hardware platform like Arduino and Raspberry-PI for IOT applications.
CO3	Familiarize with the design and implementation of IOT protocols and connecting devices for IOT application.
CO4	Analyse and integrate the IOT applications to cloud service.

CO-PO Mapping

CO4	2	3	2	2	2	1	2	-	-	-	1	2	1	2	2

Syllabus

Unit 1

Introduction to IOT Overview of machine-to-machine communication - Sensing – Actuations-Basics of Networking- Introduction to Micro-Controllers-Introduction to Embedded systems.

Unit 2

Basics of networking for device-to-device communication ,Communication Protocols – wired and wireless communication – Network Topology-Sensor Networks-Introduction to Arduino and Raspberry-PI-Introduction to IOT protocols-MQTT-COAP-Wi-Fi and Bluetooth connections in Arduino-Raspberry-PI Ethernet and Wi-Fi connectivity

Unit 3

Programming Arduino and Raspberry-PI Introduction to Arduino programming – Arduino GPIO's – Arduino Digital and Analog Input & Output - Interfacing Sensors to Arduino – Interfacing communication devices to Arduino – Configuring Raspberry-PI-Introduction to python-Programming Raspberry-PI using python- Raspberry-PI GPIO's- Interfacing sensors to Raspberry-PI- Communicating Arduino and Raspberry-PI using ethernet / Bluetooth/ Wi-Fi- Remote Actuation and control of motors, LED's and Relays using Arduino and Raspberry-PI.

Unit 4

Introduction to cloud and IOT cloud Services - Cloud services for IOT storage-Introduction to cloud services to visualize IOT data- Streaming IOT data to cloud-Plot and Visualize data using cloud tools- Adding IOT devices to cloud- Integrating Arduino and Raspberry-PI to ThingSpeak /IBM Watson.

Course Objectives
- This course provides the basic concepts of deep learning and implementation using Matlab/Python.
- This course provides the application of deep learning algorithms in signal and image data analysis.
- This course covers the concept of deep learning algorithms such as transfer learning and attention models for signal and image analysis.

Course Outcomes

After completing this course, students will be able to

CO1	Apply the fundamentals of deep learning.
CO2	Apply deep learning algorithms using Matlab/Python.
CO3	Apply deep learning models for signal analysis
CO4	Implement deep learning models for image analysis.

Course Objectives

- This course aims at introducing the concept of data structure hierarchy.
- It will also expose the students to the basic and higher order data structures.
- Further the students will be motivated to apply the concept of data structures to various engineering problems.

Course Outcomes

After completing this course, students will be able to

CO1	Implement functional and object-oriented programs in Scala, including using higher-order functions, pattern matching, and type classes
CO2	Create and maintain a Spark deployment, including cluster configuration, resource allocation, and job monitoring
CO3	Deploy of Spark for various use cases, such as ETL, data warehousing, and real-time analytics.
CO4	Analyze real-world data sets and extract meaningful insights using statistical and machine learning techniques

Syllabus

Unit 1

Introduction to Big Data Analytics: Definition, characteristics, and importance of big data, tools and technologies for big data analytics, State-of-the-art computing paradigms/platforms, Hadoop ecosystem in Brief, Mapper, Reducer.

Unit 2

Introduction to Functional Programming (FP), FP concepts in Scala Programming, Mutable and Immutable Data structures, Scala Collections, Type Hierarchy, Higher Order Functions, Closures, ConsList, Tail Recurrsion, Object Oriented Programming in Scala, Introduction to concurrency

Unit 3

Basic entity classes and objects in Scala, Spark Architecture, Spark Cluster, Resilient Distributed Datasets (RDDs), Spark Transformations and Actions APIs, DataFrames and Datasets in Spark, Basic Operations on RDDs and DataFrames, lazy evolutions and optimization, Directed Acyclic Graph (DAG)

Unit 4

Introduction to Machine Learning with Spark, MLlib and its algorithms, Building a Machine Learning Pipeline in Spark, Case Study in Healthcare, Finance, etc.

25AID214	Operating System	L-T-P-C: 2 0 2 3

Course Objectives

- To give insight about design and development of Operating Systems
- To introduce the concepts of process creation and synchronization.
- To introduce the memory management techniques used by the Operating System.
- To understand the adaptation of the concepts by modern Operating Systems.

Course Outcomes

After completing this course, students will be able to

CO1	Illustrate the use of system calls to perform basic Operating System functionalities.
CO2	Apply the algorithms for resource management
CO3	Analyze the usage of Synchronization techniques.
CO4	Analyze memory management techniques.

CO4	2	2	3	1	1	-	-	-	2	2	-	2	1	-	-

Syllabus

Unit 1

Operating systems, structure, operating systems services, system calls. Process and Processor management: Process concepts, process scheduling and algorithms, threads, multithreading. CPU scheduling and scheduling algorithms.

Unit 2

Process synchronization, critical sections, Deadlock: Shared resources, resource allocation and scheduling, resource graph models, deadlock detection, deadlock avoidance, deadlock prevention algorithms, mutual exclusion, semaphores, monitors, wait and signal procedures. Memory management: contiguous memory allocation, virtual memory, paging, page table structure, demand paging, page replacement policies, thrashing, segmentation.

Unit 3

Disk scheduling algorithms and policies, File management: file concept, types and structures, directory structure,Case study on Unix (about process management, Thread management and Kernel) and Mobile OS – iOS and Android – Architecture and SDK Framework, Media Layer, Services Layer, Core OS Layer, File System)

25AIC215	High-Performance and Cloud Computing	L-T-P-C: 2- 0 -2- 3

Course Objectives

- Familiarize student with architectural overview of modern HPC and GPU based heterogeneous architectures, focusing on its computing power versus data movement needs.
- Familiarize the students working with cloud platforms and services to configure and use computational resources and storage.
- To educate students how to write efficient parallel programming and GPU programming.
- To discuss various application of HPC computational techniques in computational science.

Course Outcomes

After completing this course, students will be able to

CO1	Apply high-performance computing in different research field.
CO2	Design OpenMPI programme and CUDA programme
CO3	Simulate on cloud computing system.
CO4	Evaluate how the convergence of HPC and AI is transforming the data science.

CO-PO Mapping

PO/PSO CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CO4	2	2	1	2	3	2	1	1	2	1	2	3	3	3	3

Syllabus

Unit 1

Introduction to basic architecture and OS concepts –architecture of parallel computing–shared and distribution memory in parallel computing – parallel algorithm – performance metrices of parallel algorithm.

Unit 2

Introduction to OpenMP – essentials of OpenMP – data sharing and synchronization – efficient OpenMP for matrix computing – Introduction to MPI and distributed memory parallel computing – communicating using MPI – Matrix representation of physical system and parallel matrix solvers – domain decomposition techniques

Unit 3

Overview of GPU architecture and its evolution –introduction to GPGPU and CUDA – CUDA programming – thread execution in CUDA programming – matrix computing in CUDA -introduction to cuBLAS and cuDNN libraries for linear algebra and deep learning - case studies of GPU: accelerated applications in scientific computing, data analytics, and machine learning

Unit 4

Introduction to cloud computing and its importance – benefits and challenges of cloud computing - types of cloud services (IaaS, PaaS, SaaS) and their characteristics - cloud computing architecture and its components - cloud storage and its types - cloud networking and its challenges - cloud security and its importance - cloud application

- benefits and challenges of HPC and AI - synergy between HPC and AI - training and inference of AI models using HPC

22ADM111	Glimpses of Glorious India	L-T-P-C: 2- 0- 1- 2

Course Objectives

- To deepen students' understanding and further their knowledge about the different aspects of Indian culture and heritage.
- To in still into students a dynamic awareness and understanding of their country's achievements and civilizing influences in various fields and at various epochs.

Course Outcomes

After completing this course, students will be able to

CO1	Get an overview of Indian contribution to the world in the field of science and literature.
CO2	Understand the foundational concepts of ancient Indian education system.
CO3	Learn the important concepts of Vedas and Yogasutra-s and their relevance to daily life.
CO4	Familiarize themselves with the inspirational characters and anecdotes from the Mahābhārata and Bhagavad Gita and Indian history.
CO5	Gain an understanding of Amma's role in the empowerment of women

23LSE211	**Life Skills for Engineers II**	**L-T-P-C: 1 0 2-2**

Course Objectives

- Assist students in inculcating Soft Skills and developing a strong personality
- Help them improve their presentation skills
- Aid them in developing their problem solving and reasoning skills
- Facilitate them in improving the effectiveness of their communication.

Course Outcomes

After completing this course, students will be able to

CO1	Soft Skills: To develop greater morale and positive attitude to face, analyse, and manage emotions in real life situations, like placement process.
CO2	Soft Skills: To empower students to create better impact on a target audience through content creation, effective delivery, appropriate body language and overcoming nervousness, in situations like presentations, Group Discussions and interviews.
CO3	Aptitude: To analyze, understand and employ the most suitable methods to solve questions on arithmetic and algebra.
CO4	Aptitude: To investigate and apply suitable techniques to solve questions on logical reasoning and data analysis.
CO5	Verbal: To learn to use more appropriate words in the given context. To have a better understanding of the nuances of English grammar and become capable of applying them effectively.
CO6	Verbal: To be able to read texts critically and arrive at/ predict logical conclusions. To learn to organize speech and incorporate feedback in order to convey ideas with better clarity.

CO-PO Mapping

PO/ PSO CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CO2									2	3		3			
CO3		3		2											
CO4		3		2											
CO5										3		3			
CO6									3	3		3			

Syllabus
Soft Skills

Communication: Process, Language Fluency, Non-verbal, Active listening. Assertiveness vs. aggressiveness. Barriers in communication. Digital communication Presentations: Need, importance, preparations, research and content development, structuring and ensuring flow of the presentation. Ways and means of making an effective presentation: Understanding and connecting with the audience – using storytelling technique, managing time, appropriate language, gestures, posture, facial expressions, tones, intonations and grooming. Importance of practice to make an impactful presentation.

Aptitude

Problem Solving II

Equations: Basics, Linear, Quadratic, Equations of Higher Degree and Problems on ages. Logarithms, Inequalities and Modulus: Basics

Time and Work: Basics, Pipes & Cistern, and Work Equivalence.

Time, Speed and Distance: Basics, Average Speed, Relative Speed, Boats & Streams, Races and Circular tracks.

Logical Reasoning: Arrangements, Sequencing, Scheduling, Venn Diagram, Network Diagrams, Binary Logic, and Logical Connectives.

Verbal

Vocabulary: Aid students learn to use their vocabulary to complete the given sentences with the right words. Usage of more appropriate words in different contexts is emphasized.

Grammar (Basic-intermediate): Help students master usage of grammatical forms and enable students to identify errors and correct them.

Reasoning: Emphasize the importance of avoiding the gap (assumption) in arguments/ statements/ communication.

Reading Comprehension (Basics): Introduce students to smart reading techniques and help them understand different tones in comprehension passages.

Speaking Skills: Make students be aware of the importance of impactful communication through individual speaking activities in class.

Writing Skills: Introduce formal written communication and keep the students informed about the etiquette of email writing.

Evaluation Pattern

Assessment	Internal	External
Continuous Assessment(CA)-Soft Skills	30	-
Continuous Assessment(CA)-Aptitude	10	25
Continuous Assessment(CA)-Verbal	10	25
Total	50	50

SEMESTER 5

25MAT306	Mathematics for Intelligent Systems 5	L-T-P-C:2-0-2-3

Course Objectives

- To introduce students to the concepts of probabilistic graphical models and their applications in various fields.
- To teach students the methods of representation learning in Bayesian Networks.
- To enable students to perform inference in Markov Networks and Markov Random Fields.
- To provide an appreciation of probabilistic reasoning required for AI.

Course Outcomes

After completing this course, students will be able to

CO1	Model complex systems using the basics of probabilistic graphical models.
CO2	Develop a mathematical foundation of Bayesian Networks and their applications in real-world scenarios.
CO3	Develop directed and undirected graphical models.
CO4	Apply graphical models to real-world problems such as image recognition, natural language processing, and recommendation systems.

CO-PO Mapping

PO/ PSO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CO4	3	3	3	2	3	-	-	-	3	2	-	3	2	-	3

Syllabus

Unit 1
Introduction to probabilistic graphical models, Probabilistic AI, Introduction to Bayesian Networks, Representation Learning in Bayesian Networks, Inference in Bayesian Networks

Unit 2
Markov Networks, Independencies in Markov Networks, Hidden Markov Models

Unit 3
Markov Random Fields (MRF), Decision Networks, From Bayesian Networks to Markov Networks

25AID301	Reinforcement Learning	L-T-P-C: 2- 0- 2- 3

Course Objectives

- This course will provide a solid introduction to the field of reinforcement learning.
- It will also make the students learn about the core challenges and approaches, including exploration and exploitation.
- The course will make the students well versed in the key ideas and techniques for reinforcement learning.

Course Outcomes

After completing this course, students will be able to

CO1	Formulate an application problem as a reinforcement learning problem
CO2	Implement common reinforcement learning algorithms using Python/Matlab
CO3	Evaluate reinforcement learning algorithms on the metrics such as regret, sample complexity, computational complexity, empirical performance, and convergence
CO4	Evaluate different approaches for addressing exploration vs exploitation challenge in terms of performance, scalability, complexity of implementation, and theoretical guarantees

CO-PO Mapping

PO/ PSO	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3

CO4	1	1	1	1	1	-	-	1	-	-	-	1	-	3	1

Syllabus

Unit 1

Introduction to Reinforcement Learning – History of Reinforcement Learning - Elements of Reinforcement Learning – Limitations and scope

Unit 2

Multi-armed Bandits – Finite Markov Decision Processes – Dynamic Programming – Policy evaluation – Policy improvement – Policy Iteration – Value Iteration

Unit 3

Monte Carlo Methods – Monte Carlo prediction – Monte Carlo control – Incremental Implementation – Temporal-Difference Learning – TD prediction – Q-Learning - n-step Bootstrapping

Unit 4

Planning and Learning with Tabular Methods – Models and planning – Prioritized sweeping – Trajectory sampling – Heuristic search – Rollout algorithms

23LSE301	Life Skills For Engineers III	L-T-P-C : 1 0 2-2

Course Objectives

- Help students understand corporate culture, develop leadership qualities and become good team players
- Assist them in improving group discussion skills
- Help students to sharpen their problem solving and reasoning skills
- Empower students to communicate effectively

Course Outcomes

After completing this course, students will be able to

CO1	Soft Skills: To improve the inter-personal communication and leadership skills, vital for arriving at win-win situations in Group Discussions and other team activities.
CO2	Soft Skills: To develop the ability to create better impact in a Group Discussions through examination, participation, perspective-sharing, ideation, listening, brainstorming and consensus.
CO3	Aptitude: To identify, investigate and arrive at appropriate strategies to solve questions on geometry, statistics, probability and combinatorics.
CO4	Aptitude: To analyze, understand and apply suitable methods to solve questions on logical reasoning.
CO5	Verbal: To be able to use diction that is more refined and appropriate and to be competent in spotting grammatical errors and correcting them.
CO6	Verbal: To be able to logically connect words, phrases, sentences and thereby communicate their perspectives/ideas convincingly.

CO-PO Mapping

PO/ PSO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO															
CO1									3	3	2	3			
CO2										3	2	2			
CO3		3		2											
CO4		3		2											
CO5										3		3			
CO6									3	3		3			

Soft Skills

Professional Grooming and Practices: Basics of corporate culture, key pillars of business etiquette – online and offline: socially acceptable ways of behavior, body language, personal hygiene, professional attire and Cultural adaptability and managing diversity. Handling pressure, multi-tasking. Being enterprising. Adapting to corporate life: Emotional Management (EQ), Adversity Management, Health consciousness. People skills, Critical Thinking and Problem solving.

Group Discussions: Advantages of group discussions, Types of group discussion and Roles played in a group discussion. Personality traits evaluated in a group discussion. Initiation techniques and maintaining the flow of the discussion, how to perform well in a group discussion. Summarization/conclusion.

Aptitude

Problem Solving III
Geometry: 2D, 3D, Coordinate Geometry, and Heights & Distance.
Permutations & Combinations: Basics, Fundamental Counting Principle, Circular Arrangements, and Derangements.
Probability: Basics, Addition & Multiplication Theorems, Conditional Probability and Bayes' Theorem.
Statistics: Mean, Median, Mode, Range, Variance, Quartile Deviation and Standard Deviation.
Logical Reasoning: Blood Relations, Direction Test, Syllogisms, Series, Odd man out, Coding & Decoding, Cryptarithmetic Problems and Input - Output Reasoning.

Verbal

Vocabulary: Create an awareness of using refined language through idioms and phrasal verbs.

Grammar (Upper Intermediate-Advanced): Train Students to comprehend the nuances of Grammar and empower them to spot errors in sentences and correct them.

Reasoning: Enable students to connect words, phrases and sentences logically.

Oral Communication Skills: Aid students in using the gift of the gab to interpret images, do a video synthesis, try a song interpretation or elaborate on a literary quote.

Writing Skills: Practice closet tests that assess basic knowledge and skills in usage and mechanics of writing such as punctuation, basic grammar and usage, sentence structure and rhetorical skills such as writing strategy, organization, and style.

25MAT316	Mathematics for Intelligent Systems 6	L-T-P-C:2-0-2-3

Course Objectives

- To introduce students to the concept of Neuro-symbolic AI and its significance in artificial intelligence.
- To provide an overview of knowledge graphs and their applications in various domains

Course Outcomes

After completing this course, students will be able to

CO1	Develop intelligent systems using the concept of Neuro-Symbolic AI.
CO2	Develop knowledge representation and reasoning techniques in Neuro-Symbolic AI.
CO3	Apply the concepts of logical neural networks and Markov random fields in Neuro-Symbolic AI
CO4	Develop hybrid models that combine different AI approaches, such as Neuro-Symbolic AI and deep learning

CO-PO Mapping

CO4	-	-	-	-	-	3	3	3	-	-	-	2	-	-	-

Syllabus

Unit 1

Introduction to analog computer, direct versus indirect analogies, A short history of analog computing, Characteristics of analog computers, Computing elements – machine units, summer, integrators, free elements, potentiometers, function generators, multiplication, comparators and switches, Input/Output devices.

Unit 2

Analog computer operation, basic programming – radioactive decay, analytical solutions, using an analog computer, scaling, harmonic functions, sweep, Mathematical pendulum, Straight forward implementation, variants, Mass-spring-damper system, analytical solution, using an analog computer, RLC-circuit

Unit 3

Inverse functions, square root, division, power and polynomials, low pass filter, triangle/square wave generator, Ideal diode, absolute value, limiters, dead space, hysteresis, Bang-bang, Minimum/Maximum holding circuits, sample and hold, time derivative, time delay, historic approaches to delay, digitization, sample and hold circuits, analog delay network.

Unit 4

Inverse Chemical kinetics, damped pendulum with external force, MATHIEU'S equation, Introduction, Scaling and programming, VANDER POL's equation, Programming, Solving the one dimensional SCHRODINGER equation, Ballistic trajectory, Charged particle in a magnetic field, RUTHERFORD scattering, Celestial mechanics, Bouncing ball, Zombie apocalypse, ROSSLER attractor, LORENZ attractor, another Lorenz attractor, CHAU attractor, Nonliner chaos, AIZAWA attractor, NOSE-HOOVER oscillator, rotating spiral, flow around an airfoil, Heat transfer, Two dimensional heat transfer, systems of linear equations, Human-in-the- loop, Inverted pendulum, Double pendulum

Unit 5

Hybrid computing - Hybrid controllers, Basic operations, shell trajectory, data gathering, training an AI with analog computer.

Textbooks / References

23LSE311	Life Skills for Engineers IV	1-0-2 2

Course Objectives

· Help students prepare resumes and face interviews with confidence
· Support them in developing their problem-solving ability
· Assist them in improving their problem solving and reasoning skills
· Enable them to communicate confidently before an audience

Course Outcomes

CO1 - Soft Skills: To acquire the ability to present themselves confidently and showcase their knowledge, skills, abilities, interests, practical exposure, strengths and achievements to potential recruiters through a resume, video resume, and personal interview.

CO2 - Soft Skills: To have better ability to prepare for facing interviews, analyse interview questions, articulate correct responses and respond appropriately to convince the interviewer of one's right candidature through displaying etiquette, positive attitude and courteous communication.

CO3 - Aptitude: To manage time while applying suitable methods to solve questions on arithmetic, algebra and statistics.

CO4 - Aptitude: To investigate, understand and use appropriate techniques to solve questions on logical reasoning and data analysis.

CO5 - Verbal: To use diction that is less verbose and more precise and to use prior knowledge of grammar to correct/improve sentences.

CO6 -Verbal: To understand arguments, analyze arguments and use inductive/deductive reasoning to arrive at conclusions. To be able to generate ideas, structure them logically and express them in a style that is comprehensible to the audience/recipient.

Syllabus

Soft Skills

Team Work: Value of teamwork in organizations, Definition of a team. Why team? Effective team building. Parameters for a good team, roles, empowerment and need for transparent communication, Factors affecting team effectiveness, Personal characteristics of members and its influence on team. Project Management Skills, Collaboration skills.

Leadership: Initiating and managing change, Internal problem solving, Evaluation and co-ordination, Growth and productivity, Importance of Professional Networking.

Facing an interview: Importance of verbal & aptitude competencies, strong foundation in core competencies, industry orientation / knowledge about the organization, resume writing (including cover letter, digital profile and video resume), being professional. Importance of good communication skills, etiquette to be maintained during an interview, appropriate grooming and mannerism.

Aptitude

Problem Solving II

Sequence and Series: Basics, AP, GP, HP, and Special Series.

Data Sufficiency: Introduction, 5 Options Data Sufficiency and 4 Options Data Sufficiency. Logical reasoning: Clocks, Calendars, Cubes, Non-Verbal reasoning and Symbol based reasoning.

Campus recruitment papers: Discussion of previous year question papers of all major recruiters of Amrita Vishwa Vidyapeetham.

Competitive examination papers: Discussion of previous year question papers of CAT, GRE, GMAT, and other management entrance examinations.

Miscellaneous: Interview Puzzles, Calculation Techniques and Time Management Strategies. Verbal Vocabulary: Empower students to communicate effectively through one-word substitution.

Grammar: Enable students to improve sentences through a clear understanding of the rules of grammar.

Reasoning: Facilitate the student to tap his reasoning skills through Syllogisms, critical reasoning arguments

and logical ordering of sentences.

Reading Comprehension (Advanced): Enlighten students on the different strategies involved in tackling reading comprehension questions.

Public Speaking Skills: Empower students to overcome glossophobia and speak effectively and confidently before an audience.

Writing Skills: Practice formal written communication through writing emails especially composing job application emails.

CO3		3		2								
CO4		3		2								
CO5										3		3
CO6									3	3		3

Course Objectives

• This course aims to provide the cutting-edge concepts in deep reinforcement learning

• It also helps the students to train an agent which can perform a variety of complex tasks.

• It will also help students to learn about the core challenges and approaches, including generalization and exploration and also make the students well versed in the key ideas and techniques for deep reinforcement learning

Course Outcomes

After completing this course, the students will be able to

CO1: Decide whether a given application problem should be formulated as a Deep Reinforcement Learning (DRL) problem.

CO2: Correctly define the problem formulation, design the most suitable algorithm from the different possible classes of DRL algorithms, providing a justification

CO3: Implement and apply temporal-difference reinforcement learning algorithms

CO4: Apply the multiple criteria for analysing and evaluating the DRL algorithms on the relevant metrics: regret, sample complexity, computational complexity, empirical performance, convergence.

CO5: Implement in code the main DRL algorithms and apply it to solve several practical problems in different application domains, evaluating experimentally their performance.

CO2	-	-	-	-	-	3	2	3	-	-	-	-	-	-
CO3	-	-	-	-	-	3	2	3	-	-	-	-	-	-

Syllabus
Unit 1

Over view of the global environment crisis – Biogeochemical cycles – Climate change and related international conventions and treaties and regulations – Ozone hole and related International conventions and treaties and regulations – Overpopulation – energy crisis – Water crisis – ground water hydrogeology – surface water resource development.

Unit 2
Ecology, biodiversity loss and related international conventions – treaties and regulations – Deforestation and land degradation – food crisis – water pollution and related International and local conventions – treaties and regulations – Sewage domestic and industrial and effluent treatment – air pollution and related international and local conventions – treaties and regulations – Other pollution (land, thermal, noise).

Unit 3
Solid waste management (municipal, medical, e-waste, nuclear, household hazardous wastes) – environmental management – environmental accounting – green business – eco-labelling – environmental impact assessment – Constitutional – legal and regulatory provisions – sustainable development.

23LAW300	INDIAN CONSTITUTION	L-T-P-C: P/F

Course Objectives

- To know about Indian constitution
- To know about central and state government functionalities in India
- To know about Indian society

Course Outcomes

CO1: Understand the functions of the Indian government
CO2: Understand and abide the rules of the Indian constitution
CO3: Understand and appreciate different culture among the people

CO-PO Mapping

PO/PSO CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

CO3	-	-	-	-	-	3	2	3	-	-	-	-	-	-

Syllabus

Unit 1

Historical Background – Constituent Assembly Of India – Philosophical Foundations Of The Indian Constitution – Preamble – Fundamental Rights – Directive Principles Of State Policy – Fundamental Duties – Citizenship – Constitutional Remedies For Citizens.

Unit 2

Union Government – Structures of the Union Government and Functions – President – Vice President – Prime Minister – Cabinet – Parliament – Supreme Court of India – Judicial Review.

Unit 3

State Government – Structure and Functions – Governor – Chief Minister – Cabinet – State Legislature – Judicial System in States – High Courts and other Subordinate Courts.

Assessment	Internal	End Semester
Midterm Exam	20	
*Continuous Assessment (CA)	40	
End Semester/Projects		40

•CA – Can be Quizzes, Assignment, Projects, and Reports

25AIC498	Project Phase – 1	L-T-P-C: 0- 0- 12- 6

Course Objectives

- Project Phase – 1 aims at helping students to identify the research problems by conducting a thorough literature review

- The course introduces the students to real world problems associated with AI

- The course also aims at helping students to publish scientific articles in peer reviewed scientific publications.

Course Outcomes

After completing this course, students will be able to

CO1	Identify a valid research problem by conducting literature review in the appropriate area
CO2	Identify the appropriate methodology to solve the research problem.
CO3	Apply the AI tools & techniques to solve the identified problem.
CO4	Communicate scientific discoveries through peer-reviewed publications.

SEMESTER 8

25AIC499	Project Phase – II	L-T-P-C: 0- 0- 20- 10

Course Objectives

- Project Phase – 2 aims at helping students to solve the identified research problem

- The course introduces the students to real world problems associated with AI

- The course also aims at helping students to publish scientific articles in peer reviewed scientific publications.

Course Outcomes

CO1	Solve a valid research problem by employing appropriate tools & techniques.
CO2	Implement the appropriate methodology to solve the research problem.
CO3	Apply the AI tools & techniques to solve the identified problem.
CO4	Communicate scientific discoveries through peer-reviewed publications.

AI and DS (Cyber Physical Systems and Security)

Micro-credential Courses

Semester 1

Ecommerce and supporting technologies

Number theory for RSA algorithm

Computational discovery in Jupyter

Introduction to Linux

Semester 2

Introduction to Java with Cryptography

AES, ECC and hashing algorithms

Introduction to OOP

Introduction to Javascript – Playing with Chaos

Semester 3

Introduction to UML & Design patterns in Java

Introduction to Blockchain technology

Introduction to TinyML

Introduction to ReactJS

Semester 4

Swift and Kotlin

Introduction to malware & malware analysis

Embedded Systems

Introduction to smart grid and security

Semester 5

Quantum Computing – Fundamentals

Quantum Machine Learning

Quantum Cryptography

Introduction to smart cities

Semester 6

Water marking & steganography

Database and OS security

Ethical hacking & VAPT

Application and Web application security

Detailed Syllabus

Semester 1

25AIC122   Number theory for RSA algorithm

CO: Understand and apply fundamental concepts of number theory, implementation of the RSA encryption algorithm

Divisibility and Modular Arithmetic, Representation and Arithmetic of Integers in different bases, Chinese remainder theorem, Fast modular exponentiation, Fermat's Little theorem, Euler Phi Function , Euler's Theorem, RSA Algorithm , Digital Signature

Reference

Introduction to Cryptography by Alexander Staneyovitch CRC Press, 2011

25AIC121   Ecommerce and supporting technologies

CO: Analyze and apply key eCommerce concepts and supporting technologies

E-commerce fundamentals; different types of E-commerce; major components; business models; business issues. Security requirements; basic cryptography; encryption methods; public key encryption; message digest; message authentication; digital signature; digital certificate; IPSec; firewalls; SSL/TLS. 3. Internet Payment Systems, Credit card payment; E-cash; E-check; Internet payment services; mobile payment; blockchain; cryptocurrencies.

References

1. https://github.com/AAdewunmi/Book-Store-ECommerce-Application

2. https://github.com/AAdewunmi/Shopme-ECommerce-Application

3. https://clas.iusb.edu/math-compsci/_prior-thesis/SKhodali_thesis.pdf

4. Auth n Capture : Introduction to India's Digital Payments Ecosystem – Adithya Kulkarni

5. Cryptography and Network Security: Principles and Practice - William Stallings, Fifth Edition

25AIC123   Computational discovery using Jupyter Notebooks

CO: Utilize Jupyter Notebooks for computational discovery by integrating programming, data visualization, and interactive analysis to explore and solve scientific and real-world problems efficiently

Introduction to Programming in Python, Introduction to Jupyter and Marimo notebooks, Computing with Fibonacci Numbers

Root finding, Newton's Method, and Dynamical Systems, Fractals and Julia Sets, Mandelbrot Polynomials and Matrices

Chaos Game Representation and Iterated Function Systems, L system Trees

References

1. Neil J. Calkin, Eunice Y. S. Chan, Robert M. Corless · Computational Discovery on Jupyter

2. https://computational-discovery-on-jupyter.github.io/Computational-Discovery-on-Jupyter/index.html

25AIC124   Introduction to Linux

CO: Develop foundational understanding of Linux operating systems

Linux file systems. File manipulation commands. User and group management. Process management. Network tools .Exploring kali Linux tool kits.

References

1. Linux Essentials for Cyber Security –Wiiliam Bo Rothwell, Denise Kinsey

2. The Linux commands handbook – Falvio copes

Semester 2

25AIC131   Introduction to Java with Cryptography

CO: Understand and apply core Java programming concepts along with cryptographic techniques Cryptography basics. Java BigInteger. Java Cryptography Architecture. AES using Java –Java Cipher suite. References

1. Java Cryptography – Johnathan B Knudsen

2. https://docs.oracle.com/en/java/javase/17/security/java-cryptography-architecture-jca-reference-guide.html

25AIC132   AES, ECC and hashing algorithms

CO: Analyze and implement cryptographic techniques

Binary operations, Ring, Fields , Building Finite Fields Scaled down AES, Elliptic Curves, Groups, Elliptic curve , Modular Elliptic Curves, Addition operation , Diffie-Hellman Key Exchange Elliptic curve version of Elgamal Cryptosystem

Reference

1.   Alexander Staneyovitch , Introduction to Cryptography, CRC Press, 2011

25AIC133   Introduction to OOP

CO: Understand and apply the fundamental principles of Object-Oriented Programming

Classes, Objects, Encapsulation, Abstraction, Inheritance, and Polymorphism. Defining classes, creating objects, constructors, and destructors.Access Modifiers . Overloading ,Oveeriding.Exception handling.

Reference

1. Thinking in Java –Bruce Eckel ,Fourth Edition

2. Java The Complete Reference , Herbert Schildt

25AIC134   Introduction to Javascript – Playing with Chaos

CO: Explore and apply fundamental JavaScript concepts
Variables ,loops and functions in JavaScript .Animations in HTML5. Koch Snowflake , Sierpinski Triangle ,Dragon Curve . Attractors using JavaScript.Mandelbrot Set ,Julia Set. 1S and 2D Automata , Chaos based cryptography.

1. Playing with Chaos: Programming Fractals and Strange Attractors in JavaScript ,Keith Peters.

2. https://developer.mozilla.org/en-US/docs/Web/JavaScript

Semester 3

25AIC221   **Introduction to UML & Design patterns in Java**

CO: Understand and apply UML diagrams and design patterns in Java

Object Oriented Design . Structural Diagrams-Class,Object,Component,Deployement ,Behavioural Diagrams-Use Case,Sequence,Activity,State. Design Patterns –Creational Design Patterns ,Structural Design Patterns ,Behavioural Design Patterns . Examples using Java.

References

1. UML Distilled: A Brief Guide to the Standard Object Modeling Language ,Martin Fowler, Third Edition.
2. Head First Design Patterns ,Eric Freeman, Elisabeth Robson, Elisabeth Freeman, Kathy Sierra, Bert Bates

25AIC222   **Introduction to Blockchain technology**

CO: Understand the fundamental principles of blockchain technology

Decentralized systems. Consensus, Cryptographic Hashing. Types of Blockchains,Distrubuted Ledgers, Consensus Mechanisms: Proof of Work (PoW), Proof of Stake (PoS), Delegated PoS (DPoS), Proof of Authority (PoA). Ethereum and Solidity basics.

References:

1. Mastering Block Chain ,Imran Bashir.Thrid Edition

2. https://ethereum.org/en/developers/docs/

25AIC223   **Introduction to TinyML**

CO: Understand and apply TinyML concepts to develop machine learning models

Introduction to Embedded C . Egde AI and low power devices.Microcontollers and MCU TinyML pipeline.TinyML using Matlab and Simulink / LiteRT for Microcontrollers .Case studies

References

1. TinyML: Machine Learning with TensorFlow Lite on Arduino and Ultra-Low Power Microcontrollers , Pete Warden & Daniel Situnayake

2. https://ai.google.dev/edge/litert/microcontrollers/overview

3. https://in.mathworks.com/discovery/tinyml.html

25AIC224   **Introduction to ReactJS**

CO: Understand and apply the fundamental concepts of ReactJS

React and usage. JSX and Virtual DOM .Creating functional components . Event handling. React Hooks. Fetching and displaying data using API calls. Styling in React. Building an App

References

1. Fullstack React – Anthony Accomazzo, Nate Murray & Ari Lerner

2. https://react.dev/learn/your-first-component

Semester 4

25AIC231   Introduction to Swift and Kotlin Programming

CO: Develop foundational programming skills in Swift and Kotlin Module -1

(Swift Programming)

History and evolution, Swift's role in iOS development , Basic Syntax and Data Types -Variables and constants ,Data types and type inference ,Operators, Control Flow – Conditional statements ,Loops , Functions- Defining and calling functions ,Parameter passing and return values , Collections-Arrays, Dictionaries, Sets, Optionals - Understanding and unwrapping optionals, Classes and Structures- Defining classes and structs, Properties and methods, Initialization , Protocols and Delegation- Defining and adopting protocols, Delegation pattern.

Module-2(Kotlin Programming)

History and adoption, Kotlin's role in Android development, Basic Syntax and Data Types- Variables and constants, Data types and type inference, Operators, Control Flow- Conditional statements, Loops, Functions-Defining and calling functions, Parameter passing and return values

Collections- Lists, Maps, Sets, Null Safety- Nullable types, Safe calls and the Elvis operator, Classes and Objects- Defining classes, Properties and methods, Constructors, Interfaces and Inheritance- Implementing interfaces, Inheritance basics

References

6. https://github.com/mnbayan/the-swift-programming-language-pdf/blob/master/The%20Swift%20Programming%20Language%20(Swift%205).pdf

25AIC232   Introduction to malware & malware analysis

CO: Understand the fundamentals of malware analysis

Malware –Defenition,Types.Static analysis –PE data, File metadata ,Code inspection. Dynamic Analysis – VM ,Sandboxing. Process monitoring,API hooks.Tools for static and dynamic analysis Malware evasion techniques.

References

1. Practical Malware Analysis by Michael Sikorski, Andrew Honig

2. https://www.cisa.gov/resources-tools/services/malware-analysis

25AIC233 Embedded Systems

CO: Understand the fundamentals of embedded systems

Introduction to Microcontrollers , interrupts and concurrent programming, mechanical control, state- based programming models, signaling and frequency response, mechanical design, power budgets, software, firmware, and PCB design

1. https://bulletin.stanford.edu/courses/2172791

2. https://web.stanford.edu/class/ee107/

25AIC234   Introduction to smart grid and security

CO: Understand the fundamental concepts of smart grid technology and apply security measures Introduction to Smart Grids - Evolution of Power Systems, Defining Smart Grids, Benefits and Challenges, Smart Grid Technologies- Advanced Metering Infrastructure (AMI), Communication Networks, Automation and Control, Cybersecurity in Smart Grids - Threat Landscape, Common Attack Vectors, Case Studies(Analysis of notable cyberattacks on energy systems),Security Frameworks and Protocols-Standards and Regulations, Encryption and Authentication, Incident Response,Emerging Trends and Future Directions - Integration of IoT Devices, Artificial Intelligence and Machine Learning, Policy and Regulatory Developments, Hands-On Simulationto model smart grid scenarios.

4. Smart Grid: Technology and Applications by Janaka B. Ekanayake

Semester 5.

25AIC321   Quantum Computing – Fundamentals

CO: Understand the fundamental principles of quantum computing

- Reversible Computation, Complex Numbers,

- Quantum Mechanics: Model, Unitaries, Measurements

- QC paradigms: gate-based QC, Adiabatic QC, Measurement-based QC

- Quantum circuits, gates

- Gate decomposition

- Quantum Algorithms, Deutsch-Jozsa, Simons, Bernstein-Vazirani, Grover's Algorithm, Quantum Foruier Transform

[7] https://qi.rub.de/courses/qcrypt_ws22

25AIC322   Quantum Machine Learning

CO: Understand and apply the principles of quantum computing and machine learning

Basis encodings: – Superposition for basis encodings – Amplitude amplification – Search algorithm

Quantum Neural Networks: Variational Methods – Variational eigensolvers – Adapt-VQE – Variational Methods for QML

Reference

1. https://indico.cern.ch/event/1248002/contributions/5249482/attachments/2723609/4732624/como_school_Quantum%20Machine%20Learning.pdf

2. https://uwaterloo.ca/electrical-computer-engineering/sites/default/files/uploads/documents/quantum-machine-learning.pdf

25AIC323   Quantum Cryptography

CO: Understand the principles of quantum cryptography

Quantum Key Distribution Methods, Quantum Oblivious Transfer , Quantum Random Oracles, Introduction to Encryption

Encrypting Quantum States, Public Key Encryption

References

1. https://courses.grainger.illinois.edu/cs598cto/sp2022/

25AIC324   Introduction to smart cities

CO: Understand the fundamental concepts of smart cities, including IoT, data analytics, and sustainable urban development

Introduction to Smart Cities - Key technologies: IoT, ICT, and data analytics- Smart City Infrastructure- Transportation and mobility- Energy management and smart grids- Smart Governance and Citizen Engagement- E-governance and digital services- Sustainability and Resilience - Smart city standards and frameworks

Semester 6

25AIC331   Water marking & steganography

CO: Understand and apply digital watermarking and steganography techniques

Watermarking types –Visible,Invisible .Watermarking techniques- LSB,DCT,DWT. Hands on implementation using Matlab/Python.Attacks on watermarking

Steganography –Image ,Audio ,Video,Text.Technqiues-LSB, DCT based ,Filtering and masking.Steganalysis. Hands on implementation using Matlab/Python.Attacks on watermarking

References

1. Information Hiding Techniques for Steganography and Digital Watermarking by Stefan Katzenbeisser

2. Steganography in Digital Media: Principles, Algorithms, and Applications 1st Edition by Jessica Fedrich

25AIC332   Database/ OS security

CO: Understand and implement security mechanisms for databases and operating systems

Creating and managing users in database . Assigning database roles and privileges. Backup and recovery .Database logs .Implementing encryption.SQL Injection attacks

Managing file permissions using Linux . Linux user management . Process monitoring and management in Linux. Firewall configuration .Hardening the system . Concept of honeypots.

References

1. Database System Concepts by Abraham Silberschatz, Henry F. Korth, and S. Sudarshan.

2. Linux Administration: A Beginner's Guide by Wale Soyinka ,Eighth Edition

25AIC333   Ethical hacking & VAPT

CO: Understand and apply ethical hacking techniques and Vulnerability Assessment & Penetration Testing (VAPT)

Hacking lifecycle . Service enumeration ,Network scanning . Usage of tools like Nmap ,Wireshark ,Airmon . Vulnerability assessment using Burp suite . Metasploit framework.Concept and usage of MITRE ATT&CK strategies. Adversary emulation platforms.

References

1. Penetration Testing: A Hands-On Introduction to Hacking By Georgia Weidman
2. https://docs.metasploit.com/
3. https://portswigger.net/burp

25AIC334   Application and Web application security

CO: Understand and implement security principles for applications and web applications

Secure coding practices, Common attacks –SQL injection,XSS,CSRF,SSRF) ,Usage of tools like Nmap ,Gobuster ,OpenVAS,XSS Strike,SQL Map .API security concepts. Generative AI and security risks –Prompt injection ,Data poisoning ,Model inversion attacks. Concept of SIEM.

References

2. Generative AI Security: Theories and Practices edited by Ken Huang, Yang Wang ,Ben Goertzel ,Yale Li,Sean Wright ,Jyoti Ponnapalli

25AIC431   **Network Security Testing**   **Credits: 3**   **Weekly: 2-0-2**

Course Objectives

1. Study of architecture and protocols of computer networks.
2. Study the ISO and Internet models; medium access control and retransmission protocols; protocol analysis and verification; data-communication principles.
3. Comprehend the necessity of network security along with the basic concept of Network security.
4. Investigate various network vulnerabilities like virus, worm, malware, root kit and devise strategies to mitigate them.
5. Analyse privacy threatening behavior over the internet and formulate defensive techniques to preserve privacy.

Course Outcome

Students who successfully complete this course will be able to:-
CO1: List all a years and their functionality of theI SO and Internetnet work architectures.
CO2: Describe the concepts underlying the design and implementation of the major protocols at
       various network layers.
CO3: Understand the need for network security and have through grasp of the fundamentals of
       network security.
CO4: Recognise network vulnerabilities and develop Network defensive strategies by utilizing
       Intrusion Detection Systems, Honey pot etc.
CO5: Identify and defend against various privacy threatening tools and techniques over the internet.

Syllabus:

Unit 1

Introduction. Overview and motivation: Telephone Network and the Internet Network, Circuit Switching vs. Packet Switching, History of the Internet.

Unit 2

Architecture-OSI, TCP/IP models, Physical and Data link layer protocols: Encoding, Framing, Error detection, HDLC, PPP, sliding window protocols. Network Layer protocols: Internet addressing, IP, ARP, ICMP, CIDR, Routing algorithms. Transport Layer protocols: UDP, TCP, flow control, congestion control. Application Layer protocols: DNS, Web, HTTP, email, authentication, encryption.

Unit 3

Introduction to Network Security, Need for Network Security, Network Security Fundamentals, Principles of Security, Working of internet and DNS Vulnerabilities, Secure Network Communication.Malware, Insider Attack and Defence, Computer Virus Types and Defence, Computer Worms, Rootkits, Botnet, Denial of Service Attack.

Unit 4

Need For Physical Security, User Authentication Technologies, Environmental Attacks and Accidents, Firewall, Intrusion Detection System, Honeypot, Tunnelling, Virtual Private Network, Privacy Preserving Communication, Anonymity, Onion Routing.

25AIC432   Advanced Ethical Hacking and Red Teaming   Credits: 3   Weekly: 2-0-2

Course Objectives

The main objectives of this course are to:

1. To understand Information Security, Cyber threats, attacks, web security.

2. To know about different modes of hacking tools and phases of penetration tests and Methodologies.

Course Outcome

CO 1: Understand the basics of information security, threats, and its attacks

CO 2: Understand the fundamentals of ethical hacking with the hacking methodologies
CO 3: Understand the vulnerabilities and use the frameworks to identify vulnerabilities by Service scan
CO 4: Understand the web security issues with the fundamentals of OWASP
CO 5: Analyze the phases of the penetration test with the methods

Syllabus:

Unit 1 FUNDAMENTALS OF ETHICAL HACKING

Overview of Cyber threats – Data and Network Security Attacks – Threats: MAC spoofing – Access control Network protocol and services–Hacking terms - Ethical Hacking overview – Modes of Ethical Hacking – Ethics and Legality.

Unit 2 HACKING METHODOLOGY INVESTIGATION

Foot printing: Reconnaissance - Foot printing theory – Penetration test – Phases of Penetration test - Methods of Foot printing – Network Information gathering process – Terminologies of Foot printing –Foot printing through search engine directives – Who is tool –NetCraft – Extract Information from DNS - Foot printing from Email servers -Social Engineering.

Unit 3 SCANNING AND ENUMERATION

Scanning: Concept of Nmap - - Port scanning with Nmap – Subnet - Scanning IPs with Nmap Pings and Ping sweeps – Port - Three way handshake – NmapSyn scanning – Nmap TCP Scan – Nmap UDP Scan - Bypass of IPS and IDS – Nmap Script Engine Enumeration: Service Fingerprinting – Vulnerability Scanners – Basic Banner Grabbing – Common Network services – SMTP – DNS – RPCBIND Enumeration – SMB – NetBIOS.

Unit 4 SYSTEM AND NETWORK VULNERABILITY

Metasploit – Penetration testing with framework Metasploit – Scan services to identify vulnerabilities – Scan FTP services – Scan HTTP services – Exploitation – Post exploitation techniques –Meterpreter – Rootkit – Backdoor – Password hashes.

Unit 5 SOFTWARE VULNERABILITY

Fundamentals of OWASP Zed Attack Proxy (ZAP) – Web app vulnerability scan - Code Injection Attacks – Broken Authentication – Sensitive Data Exposure – XML External Entities – Broken Access Control – Security misconfiguration – Website pen testing - Cross Site Scripting (XSS) – Insecure Deserialization – Using Components with known vulnerabilities – Insufficient logging and monitoring.

Course Objectives

1. To understand the fundamentals of information security

2. To develop and enforce information security policies and compliance

3. To design and develop secure applications

4. To manage secure infrastructure and operations

Course Outcome

- CO1: Explain fundamental concepts of information security, including risk analysis, legal issues, secure design, and security policies.
- CO2: Apply authentication and authorization principles to protect information systems and ensure compliance with security policies.
- CO3: Implement security measures for unstructured data, storage, and databases to prevent unauthorized access and data breaches.
- CO4: Design and develop secure applications by identifying and mitigating software vulnerabilities, particularly in J2EE environments.

Syllabus

Unit 1
Information Security Basics Introduction to Information Security – Risk Analysis – Legal Issues – Secure Design – Policy, Standards, Procedures and Guidelines – Security Organization structure.

Unit 2
Information Security Policy and Compliance Authentication and Authorization principles - Securing unstructured data – Information Rights Management – Storage security – Data base security.

Unit 3
Secure Application Secure application design – Writing Secure Software – J2EE vulnerabilities.

Unit 4
Secure Infrastructure Management Security Operations Management – Disaster Recovery and Backups – Physical Security.

Text Books
1) Name: Information Security – The complete reference Chapters: 1-9, 11-12, 26-28, 31, 32, and 34 Author: Mark Rhodes - Ousley Publishers: McGraw Hill 2013 ISBN Number: 978-0-07-178436-8 Practicals

2) Demonstration of attacks after determining vulnerability using hacking tools. Methods to fix such vulnerability to be demonstrated during the practical using the techniques discussed in the book

"The CERT C Coding Standard". Tools to be used from https://www.kali.org/ and freely downloadable vulnerability tools.

3) Reference Book: Name: The CERT C Coding Standard Chapters: 2 – 14. Author: Robert C Seacord. Publishers: Pearson, 2009 ISBN Number: 978-0-321-56321-7

25AIC434   Cloud Security testing   Credits: 3   Weekly: 2-0-2

Course Objectives

1. Learn the security of operating systems.
2. Learn relevant tools to secure operating systems.
3. Learn how to enforce mandatory access control.
4. General information security.

Course Outcome

Students who successfully complete this course will be able to:-

CO 1: Identify and define key terms related to operating systems.

CO 2: Learn and understand the main concepts of advanced operating systems design.

CO 3: Develop the ability to protect operating systems and improve the security of operating systems from malicious software.

CO 4: Learn OS issues related to the Internet, intranets, pervasive computing , embedded systems, mobile systems, wireless networks and to design a secure operating system

Syllabus:

Unit 1

Fundamentals-OS Processes, Synchronization, Memory Management, File Systems Trusted Operating Systems, Assurance in Trusted Operating Systems, Virtualization Techniques.

Secure operating systems – Security goals, Trust model, Threat model Access Control Fundamentals–Protection system–Lampson's Access Matrix, Mandatory protection systems, Reference monitor.

Unit 2

Multics–Multics system, Multics security, Multics vulnerability analysis Security in Ordinary OS – Unix, Windows, Verifiable security goals–Information flow, Denning's Lattice model, Bell-Lapadula model, Biba integrity model, Covert channels.

Unit 3

Security Kernels–Secure Communications processor, Securing Commercial OS Secure Capability Systems – Fundamentals, Security, Challenges Secure Virtual Machine Systems. Case study – Linux kernel, Android, DVL , Solaris Trusted Extensions.

25AIC435   **IOT and OT Security Testing**   **Credits: 3**   **Weekly: 2-0-2**

Course Objectives

1. Introduce the concept and the basics of blockchain technologies,
2. Enable awareness on the different generations of blockchains.
3. Provide knowledge on various applications of blockchain technologies

Course Outcome

Students who successfully complete this course will be able to:-
1. Understand the basics of blockchain Technologies and its various applications.
2. Implement blockchain ledgers.
3. Capable to identifying problems on which blockchains could be applied.

Syllabus

Introduction – Blockchain history, basics, architectures, Types of blockchain, Base technologies – Dockers, Hash function, Digital Signature - ECDSA, Zero Knowledge Proof.

Bitcoins – Fundamentals, aspects of bitcoins, properties of bitcoins, bitcoin transactions, bitcoin P2Pnetworks,blockgenerationatbitcoins,consensusalgorithms-ProofofWork,ProofofStake, Proof of Burn.

Blockchain hyperledger – Fabric architecture, implementation, networking, fabric transactions, demonstration, smart contracts.

Applications – Blockchain applications, e-governance, smart cities, smart industries, anomaly detections, use cases, trends on blockchains, serverless blocks, scalability issues, blockchain on clouds.

25AIC436   Legal Aspects of Cyber Security   Credits: 3   Weekly: 2-0-2

Course Objectives

The course deals with all the aspects of Cyber law as per Indian/ITact. It also covers over view of Intellectual Property Right and Trademark Related laws with respect to Cyber Space.

Course Outcome

1. Students who successfully complete this course will be able to demonstrate a critical understanding of the Cyber law with respect to Indian IT/Act and Intellectual Property Rights.
2. Cyber Crimes Categories and kinds, Evolution of the IT Act, IT Act, 2000, various authorities under IT Act and their powers. Penalties & Offences, amendments.
3. Case Laws on Cyber Space Jurisdiction and Jurisdiction issues under IT Act, E –commerce and Laws in India, Digital / Electronic Signature in Indian Laws.
4. Intellectual Property Rights, Domain Names and Trademark Disputes, Copyright in Computer Programmes, Concept of Patent Right, Sensitive Personal Data or Information in Cyber Law, Cyber Law an International Perspective.

Syllabus

Unit 1: Information Security Basics

Introduction to Information Security, Risk Analysis: Identification, Assessment, and Mitigation, Legal and Regulatory Issues in Information Security, Secure Design Principles and Best Practices, Security Policies, Standards, Procedures, and Guidelines, Security Organization Structure and Roles.

Unit 2: Information Security Policy and Compliance

Authentication and Authorization Principles, Securing Unstructured Data and Data Classification, Information Rights Management (IRM), Storage Security: Encryption, Access Control, and Redundancy, Database Security: Threats, Vulnerabilities, and Countermeasures.

Unit 3: Secure Application

Principles of Secure Application Design, Writing Secure Software: Secure Coding Practices, Common Security Vulnerabilities in Applications, J2EE Security and Its Vulnerabilities, Secure Software Development Lifecycle (SDLC).

Unit 4: Secure Infrastructure Management

Security Operations Management: Monitoring, Incident Response, Disaster Recovery and Backup Strategies, Physical Security: Protecting IT Assets and Facilities, Business Continuity Planning (BCP).

25AIC437   Breach Investigation and Forensics   Credits: 3   Weekly: 2-0-2

Course Objectives

1. To design and implementation of secure software
2. To introduce the role of security in the development lifecycle
3. To design secure software
4. To learn methodological approaches to improving software security during different phases of software development lifecycle
5. To know best security programming practices

Course Outcome

Students who successfully complete this course will be able to:-

1. Explain terms used in secured software development and lifecycle process
2. Incorporate requirements into secured software development process and test software for security vulnerability
3. Identify vulnerable code in implemented software and describe attack consequences
4. Apply mitigation and implementation practices to construct attack resistant software
5. Apply secured sign principles for developing attack resistant software

Syllabus

Unit 1

Introduction & Motivation: Hacker vs. Cracker, Historical Background, Mode of Ethical Hacking, Hacker Motive, Gathering Information, Secure Software, Compliance Requirements, C-Level Language, Assets, Threats and Risks, Security Requirements, Confidentiality, Integrity, Availability

Secure Software Development Methodologies: Secure Software Development Lifecycle (SSDLC), Guidelines for Secure Software, SD-3 Principles, Security Practices, Secure coding standards, OWASP, ISO15408, Common Criteria (CC), build-insecurity

Requirements Engineering: Availability, Authenticity, Confidentiality, Efficiency, Integrity, Maintainability, Portability, Reliability, Requirements Engineering, Trustworthiness, Threat Analysis and Risk Management

Unit 2

Secure Architectural Design: Threat Modelling, Asset, Threat, Attack, Dataflow Diagram(DFD), Threat Tree (Attack Tree), STRIDE, DREAD. Security Architecture, Software Attack Surface, Secure, Mandatory Access Control (MAC), Discretionary Access Control (DAC), Role-based Access Control (RBAC), Access Matrix

Secure Coding and Security Testing: Introduction to Vulnerabilities, Vulnerability Patterns,

Secure Coding Practices, Code Checking, Tools, Cross Site Scripting, Injection Flaws, Cross Site Request Forgery, Denial of Service, Test Cases, Security Test Plan, White Box Test, Black Box Test, Penetration Testing, Code Review, Test Report

Secure Deployment: Secure Default Configuration, Product Life Cycle, Automated Deployment Process, Secure Target Environment, Secure Delivery of Code, Trusted Origin, Code Signing, Least Privilege Permissions, ITIL Release and Deployment Management.

Unit 3

Security Response: Security Response, Security Bulletins, Vulnerabilities, Security Patches, Disclosure, Responsible Disclosure, Patch Tuesday, Security Response Policy, Security Response Process, Common Vulnerability Scoring System, CVSS Code & Resource Protection: Introduction to Back Door, Time Bomb, Four-Eyes Principle, Confidentiality Classification, Background Screening, Security Clearance, Offline and Online Licensing, Mechanisms, Code Obfuscation.

CO5															

25AIC438   **Threat Intelligence and Hunting**   **Credit**s: 3   **Weekly:** 2-0-2

Course Objectives

To understand the fundamentals of threat hunting and intelligence
To identify and analyze threats in a cyber environment
To mitigate and evict adversaries from a network
To apply analytical techniques to improve threat defense

Course Outcome

CO1: Explain the fundamentals of threat hunting and cyber threat intelligence (CTI), including key methodologies and frameworks.
CO2: Analyze the evolving threat landscape and effectively consume intelligence to identify potential adversaries.
CO3: Apply indicators of compromise (IOCs), exploratory analysis, and network/host analytics to detect and track adversarial activity.
CO4: Implement threat mitigation techniques and evict adversaries from compromised systems using structured hunting methodologies.

Unit 1 Threat Hunting and Intelligence Foundations

Threat Hunting and Intelligence Introduction, Find – Understanding the Threat Landscape and Intelligence Consumption, Fix – Hunting Adversaries Using Indicators, Exploratory Analysis, and Network/Host Analytics.

Unit 2 Operational Threat Hunting

Finish – Evicting Adversaries from a Network, Exploit – Using Hunting Results to Inform Intelligence Analysis, Analyze – Applying Analytical Techniques to Understand Adversary Behavior and Improve Defenses

Unit 3 Advanced Threat Hunting and Reporting

Disseminate – Producing and Reporting on Threats, Cloud Hunting – Tools and Techniques for Hunting in Modern Cloud and Containerized Environments

25AIC439   Security Technology Administration and Management Credits: 3 Weekly: 2-0-2

Overview:

This course provides a comprehensive look into the technologies and strategies used in managing both offensive and defensive aspects of cybersecurity. The curriculum is designed to deepen the students' knowledge of network security, data security, and cloud security, enhancing their skills in a variety of security tools and applications.

Course Objective:

To train students in the essential techniques of security technology administration and management, focusing on advanced concepts in network security, data security, and cloud environments. The course aims to provide a balanced approach to offensive and defensive security strategies.

Expected Outcomes:

CO1: Proficiency in advanced security tool setups such as WAFs, EDRs, CASB, and IAM systems.

CO2: Capability to implement complex security measures in both traditional and cloud environments.

CO3: Skills to conduct thorough vulnerability assessments and penetration tests.

CO4: Ability to design and deploy a comprehensive security strategy in a simulated environment.

Subject Modules:

Module 1: Network Security

Topics Covered: Firewalls, WAFs, DNS Security, EDR

Tools and Techniques: pfSense, ModSecurity, BIND, Security Onion

Module 2: Data Security

Topics Covered: DLP, CASB

Tools and Techniques: OpenDLP, MyDLP, CloudSploit

Module 3: Cloud Security

Topics Covered: Cloud Infrastructure, IAM

Tools and Techniques: Vault, OpenStack

Module 4: Offensive Security

Topics Covered: Penetration Testing, Ethical Hacking

Tools and Techniques: Metasploit, Kali Linux

CO3	-	-	1	1	-	1	1	-	2	2	-	2	3	3	3
CO4	-	1	-	-	3		1	2	2	2	-	2	3	3	3

Learning Outcomes:

After Successful completion of the course, students will be able to:

•   Identify and recognize potential known and unknown threats
•   Monitor and analyse the activities of authorised users and review their privileged access to various resources
•   Demonstrate and extrapolate understanding and working of SIEM
•   Implement secure and non vulnerable SIEM

Course Outcomes:

COs   Description
CO1   Identify and recognize potential known and unknown threats
CO2   Monitor and analyse the activities of authorised users and review their privileged access to various resources
CO3   Demonstrate and extrapolate understanding and working of SIEM
CO4   Implement secure and non vulnerable SIEM

Syllabus

Introduction to Security Intelligence & Event Management

Security technologies implemented in the IT Industry, SIEM Evolution, Introduction to SIEM, SIEM Architecture and its components, General Security Practices, Correlation - Brute Force Detection, DDos Attack, File Copying, File Integrity Change

Security Operations Center and Network Security Monitoring

What is SOC, SOC Components, Awareness of assets, aggregation and correlation, Log Collection, Monitoring & Reporting, Threat Intelligence, Alerts, Defence and Compliance, Introduction to Firewall, Switches, IPS & Directories, Collection, Detection and Analysis, Security Policies, Topologies

Investigating the Events of an Offence, Using Asset Profiles to investigate Offences & Investigating offences triggered by Flows

Events, Asset Profiles, Flows and Investigating Offences

Using Rules and Using the Network Hierarchy

Navigate rules and rule groups, Locate the rules that fired for an event or flow, and triggered an offense, Investigate which test conditions caused a rule to fire, Investigate building blocks and function tests, Examine rule actions and responses, examine for which indicators anomaly detection rules can fire, Locate and explain the structure of the Network Hierarchy, Use networks in investigations, Use Flow Bias and Direction in investigations

Index and Aggregated Data Management, Dashboards and Reports

Index Management administration, Aggregated Data Management, Navigate the Dashboard tab, Customise dashboard items, Generating reports , Applying filters

25AIC441   Security Governance, Risk and Compliance Management   Credits: 3 Weekly: 2-0-2

Course Objectives

To understand cyber crimes and categories
To study the evolution and framework of the IT act, 2000
To explore authorities and legal provisions under the it act
To analyze cyber jurisdiction issues and case laws

Course Outcome

CO1: Identify and classify different categories of cyber crimes, such as hacking, identity theft, cyber terrorism, and financial frauds, and analyze their impact on individuals and organizations.

CO2: Explain the evolution, objectives, and key provisions of the Information Technology (IT) Act, 2000, including its amendments and relevance in addressing cyber crimes.

CO3: Describe the roles, responsibilities, and powers of various authorities under the IT Act, such as CERT-In, Cyber Appellate Tribunal, and Adjudicating Officers, and assess their effectiveness in handling cyber cases.

CO4: Analyze jurisdictional challenges in cyberspace and evaluate key case laws related to cyber crimes and disputes under the IT Act.

Syllabus

Unit 1

 Cyber Crimes Categories and kinds, Evolution of the IT Act, IT Act, 2000, various authorities under IT Act and their powers. Penalties & Offences, amendments.

Unit 2

Case Laws on Cyber Space Jurisdiction and Jurisdiction issues under IT Act, E –commerce and Laws in India, Digital / Electronic Signature in Indian Laws.

Unit 3

Intellectual Property Rights, Domain Names and Trademark Disputes, Copyright in Computer Programmes, Concept of Patent Right, Sensitive Personal Data or Information in Cyber Law, Cyber Law an International Perspective.

25AIC442 Privacy, Business Continuity, and IT Service Management Credits:3 Weekly: 2-0-2

Course Description:
This course explores the interdependent domains of data privacy, business continuity planning (BCP), and IT service management (ITSM). Students will learn how organizations manage risk, protect sensitive data, and ensure uninterrupted service delivery in the face of disruptions.

Course Objectives:
By the end of the course, students will be able to:
- Understand key privacy regulations and their implications (e.g., GDPR, HIPAA).

- Design effective business continuity and disaster recovery plans.

- Apply IT service management principles using frameworks like ITIL.

- Integrate privacy and continuity considerations into IT services.

Course Outcomes (COs):
CO1: Explain the principles and legal frameworks related to data privacy and protection, including global regulations such as GDPR, HIPAA, and CCPA.

CO2: Apply business continuity planning (BCP) and disaster recovery (DR) methodologies to design resilient IT service infrastructures.

CO3: Implement IT service management (ITSM) practices based on frameworks like ITIL to ensure service quality, efficiency, and continuous improvement.

CO4: Integrate privacy, BCP, and ITSM considerations into cyber-physical and AI-enabled systems to ensure security, compliance, and service reliability.

Topics Covered:
1. **Introduction to Privacy and Data Protection**
    1. Personal vs. sensitive data
    2. Global privacy regulations (GDPR, CCPA, etc.)
    3. Data lifecycle and consent management
2. **Business Continuity Planning (BCP)**
    1. Risk assessment and business impact analysis
    2. BCP lifecycle and planning tools
    3. Disaster recovery strategies
3. **IT Service Management (ITSM)**
    1. Overview of ITIL framework
    2. Service lifecycle: strategy, design, transition, operation, and improvement

3. Incident, problem, and change management
4. **Integration and Governance**
   1. Aligning ITSM with privacy and BCP
   2. Policy development and governance structures
   3. Metrics and continuous improvement

Recommended Texts:
- *ITIL Foundation: ITIL 4 Edition* (Axelos)
- *Business Continuity and Disaster Recovery Planning for IT Professionals* by Susan Snedaker
- *Data Protection and Privacy: Data Protection and Privacy in a Networked World* by Ronald Leenes et al.

25AIC443   Malware Analysis and Reverse Engineering   Credits: 3   Weekly: 2-0-2

Overview:

This course covers the techniques and tools essential for malware analysis and reverse engineering. Students will learn to dissect malware to understand its origins, functionality, and potential impact on systems. The curriculum blends theoretical knowledge with practical skills to prepare students for real-world cybersecurity challenges.

Course Objective:

To train students to analyze, identify, and reverse engineering malware. The course aims to equip students with the ability to understand the behavior of malware, develop defensive strategies to counteract its effects, and strengthen the security posture of organizations.

Expected Outcomes:

CO1: Understand the different types of malwares and their modes of operation.

CO2: Perform static and dynamic analysis of malware.

CO3: Use reverse engineering tools to uncover malware functionality.

CO4: Develop skills to mitigate and prevent malware infections.

Subject Modules:

Module: Malware Types

Topics Covered: Viruses, Worms, Trojans, Ransomware

Tools and Techniques: Classification and taxonomy

Module: Static Analysis

Topics Covered: Code disassembly, Identifying malicious patterns

Tools and Techniques: IDA Pro, Ghidra

Module: Dynamic Analysis

Topics Covered: Behavior analysis, System monitoring

Tools and Techniques: OllyDbg, x64dbg

Module: Reverse Engineering

Topics Covered: Reverse engineering techniques, Debugging

Tools and Techniques: WinDbg, Radare2

Module: Prevention and Mitigation

Topics Covered: Anti-malware strategies, Patch management

Tools and Techniques: Antivirus tools, Patching practices

25AIC444   Cybersecurity Economics   Credits: 3 Weekly: 2-0-2

Overview:

This course delves into the economic aspects of cybersecurity, exploring how economic theory applies to cybersecurity practices, policies, and the broader impact on society. It addresses the costs of security breaches, investment in security measures, and the economic incentives that drive cyber criminals and defenders.

Course Objectives:

To provide students with an understanding of the economic factors that influence cybersecurity strategies and decisions. The course aims to equip students with the skills to analyze economic trade-offs in cybersecurity policies and practices, and to optimize cybersecurity investments.

Expected Outcomes:

CO1: Understand the economic impact of cyber threats and cybersecurity measures.
CO2: Analyze the cost-effectiveness of cybersecurity investments.
CO3: Apply economic principles to cybersecurity decision-making.
CO4: Evaluate the financial implications of cybersecurity policies.

Subject Modules:

Module: Economic Impact

Topics Covered:Cost of cyber-attacks, ROI on cybersecurity

Key Concepts: Economic analysis of cyber incidents

Module: Cybersecurity Investments

Topics Covered: Budgeting for security, Cost-benefit analysis

Key Concepts: Capital allocation for cybersecurity

Module: Economic Strategies

Topics Covered: Incentive structures, Insurance models

Key Concepts: Cybersecurity insurance, Risk mitigation

Module: Policy and Regulation

Topics Covered: Government policies, Economic incentives

Key Concepts: Regulatory impact, Compliance costs

Module: Economics of Information Goods

Topics Covered: Value of information, Digital goods economics

Key Concepts: Pricing strategies, Market dynamics

Module: Metrics from Incident Data

Topics Covered: Data-driven decision making, Incident metrics

Key Concepts: Incident response effectiveness, KPIs

Module: Behavioral Economics

Topics Covered: Human factors, Decision-making biases

Key Concepts: Behavioral impacts on security practices

25AIC445   Agile Programming and DevSecOps Credits: 3 Weekly: 2-0-2

Overview:

This course introduces students to Agile programming methodologies and the integration of security practices within the DevOps pipeline, known as DevSecOps. It aims to provide a comprehensive understanding of how agile methodologies can be adapted to include security as a core component throughout the development lifecycle.

Course Objective:

To equip students with the principles of Agile programming and the skills necessary to implement DevSecOps practices. The course will focus on the practical application of these methodologies to develop software that is secure by design.

Course Outcomes:

CO1 Understand and apply Agile methodologies in software development.

CO2 Integrate security practices into the DevOps pipeline effectively.

CO3 Use tools and techniques for continuous integration and continuous deployment (CI/CD) with a security focus.

CO4 Collaborate across teams to ensure software security from inception to deployment.

Subject Modules:

Module: Agile Foundations

Topics Covered: Agile principles, Scrum, Kanban

Tools and Techniques: JIRA, Confluence

Module: DevSecOps Introduction

Topics Covered: Security integration in DevOps

Tools and Techniques: Jenkins, Docker, Kubernetes

Module: Continuous Integration/Deployment

Topics Covered: CI/CD pipelines, Automated testing

Tools and Techniques: GitLab CI, Travis CI, Selenium

Module: Security in DevOps

Topics Covered: Automated security testing, Compliance as code

Tools and Techniques:

SonarQube, OWASP tools, Chef InSpec

25AIC447   GRC Automation and Solutions Management   Credits: 3   Weekly: 2-0-2

Course Description:
This course offers a comprehensive understanding of Governance, Risk, and Compliance (GRC) frameworks and how they can be automated using contemporary IT tools and platforms. Students will explore regulatory landscapes, risk management models, control mechanisms, and how automation enhances compliance, auditing, and decision-making in cyber-physical and AI-integrated systems.

Course Objectives:
1. To introduce the fundamental principles of Governance, Risk, and Compliance (GRC) and their relevance in enterprise environments.

2. To familiarize students with global regulatory frameworks and risk management standards such as ISO 31000, NIST, COSO, and COBIT.

3. To equip students with practical skills in automating GRC processes using industry tools and platforms like ServiceNow GRC, MetricStream, and RSA Archer.

4. To develop the ability to analyze and implement effective control mechanisms and real-time compliance monitoring systems.

5. To enable the integration of GRC strategies into AI-driven and cyber-physical systems, supporting predictive governance and data-informed decision-making.

Course Outcomes (COs):
CO1: Understand GRC principles and regulatory requirements in enterprise systems.

CO2: Apply risk management methodologies and frameworks for automation.

CO3: Design and evaluate GRC automation workflows using industry tools.

CO4: Integrate GRC strategies with AI and cyber-physical system (CPS) architectures for informed decision-making.

Topics covered
1. **GRC Foundations**
    1. Introduction to Governance, Risk & Compliance
    2. Compliance requirements (e.g., SOX, ISO, NIST)
    3. Regulatory bodies and auditing principles

2. **Risk Management & Control Frameworks**
      1. Risk identification and quantification
      2. COSO, COBIT, and ISO 31000 frameworks
      3. Control libraries and policy enforcement
3. **GRC Automation**
      1. Tools: ServiceNow GRC, MetricStream, RSA Archer
      2. Workflow automation and dashboarding
      3. Real-time monitoring and audit trails
4. **AI and CPS Integration**
      1. AI for predictive compliance and anomaly detection
      2. GRC in cyber-physical and sensor-driven systems
      3. Case studies: automated governance in AI ecosystems

Textbooks and References:

25AIC447   **Hardware Security**   **Credits: 3**   **Weekly: 2-0-2**

Course Objectives

1. Introduce the database and its security issues.
2. Compare in details the various state-of-art database security methods and techniques.
3. Learn in detail the security features in databases.
4. Understand the database security analysis tools.

Course Outcome

Students who successfully complete this course will be able to:-

CO-1 Understand and characterize modern techniques of database information security threats and techniques for database security assessment.

CO-2 Analyze information in a database to identify information security incidents

CO-3 Understand and use the main tools for database management systems monitoring.

CO-4 Apply build-in database functions to enable database integrity support.

CO-5 Create a plan for vulnerabilities detection and identification in databases.

Introduction-Database System Applications, Purpose of Database Systems, View of Data - Data Abstraction, Instances and Schemas, ER diagrams, Introduction to the Relational Model - Querying relational data, Form of Basic SQL Query - Examples of Basic SQL Queries.

Introduction to database security issues- The role of databases in information systems. Access control management features. Cryptographic data protection. SQL language features, Statistical databases.

Database security methods and techniques- Access control to database objects: tables, attributes, records. Triggers, views, data masking. Cryptographic methods of protection. Escaping queries to a database. Change Tracking. Data integrity in the databases. Database backups.

Security features in databases- SQL statements for access control. Integrity (domain, attributes, tables, referential). Database monitoring tools.

Database security analysis tools- An overview of the main methods for analyzing database security. SQL injections. Database security scanners. Writing your own security analysis tools.

25AIC448   Radio and Telecom Security Testing   Credits: 3   Weekly: 2-0-2

Overview:

This course provides an in-depth study of security in the radio and telecommunications sector, with a focus on existing protocols like SS7 and Sigtran, as well as emerging technologies like 5G. Students will learn about the vulnerabilities, security mechanisms, and best practices to secure telecommunications infrastructure.

Course Objective:

To educate students on the security challenges and solutions in the radio and telecommunications industry, emphasizing protocol-specific security for SS7, Sigtran, and 5G networks. The course aims to prepare students to identify and mitigate vulnerabilities in both legacy and modern telecom networks.

Course Outcomes:

CO – 1 Understand the security architecture of SS7 and Sigtran protocols.

CO – 2 Analyze the vulnerabilities associated with traditional and modern telecom networks.

CO – 3 Implement security strategies specific to 5G technologies.

CO – 4 Develop a comprehensive understanding of the regulatory and technical challenges in telecom security.

Subject Modules:

Module: SS7 and Sigtran Security

Topics Covered: SS7 architecture, Sigtran vulnerabilities

Technologies and Tools: Wireshark, SS7 firewalls

Module: 5G Security

Topics Covered: 5G architecture, Threat models, Security features

Technologies and Tools: Simulators, Security gateways

Module: Telecom Regulations

Topics Covered: Global regulations, Compliance requirements

Technologies and Tools: GDPR, FCC rules

Module: Advanced Telecom Threats

Topics Covered: Surveillance, Interception, Fraud risks

Technologies and Tools: Intrusion detection systems, Encryption solutions

Courses offered under the framework of

Amrita Values Programmes I and II

22AVP201   Message from Amma's Life for the Modern World

Amma's messages can be put to action in our life through pragmatism and attuning of our thought process in a positive and creative manner. Every single word Amma speaks and the guidance received in on matters which we consider as trivial are rich in content and touches the very inner being of our personality. Life gets enriched by Amma's guidance and She teaches us the art of exemplary life skills where we become witness to all the happenings around us still keeping the balance of the mind.

22ADM211 Leadership from the Ramayana

Introduction to Ramayana, the first Epic in the world – Influence of Ramayana on Indian values and culture – Storyline of Ramayana – Study of leading characters in Ramayana – Influence of Ramayana outside India – Relevance of Ramayana for modern times.

22ADM201 Strategic Lessons from the Mahabharata

Introduction to Mahabharata, the largest Epic in the world – Influence of Mahabharata on Indian values and culture – Storyline of Mahabharata – Study of leading characters in Mahabharata – Kurukshetra War and its significance - Relevance of Mahabharata for modern times.

22AVP204 Lessons from the Upanishads

Introduction to the Upanishads: Sruti versus Smrti - Overview of the four Vedas and the ten Principal Upanishads - The central problems of the Upanishads – The Upanishads and Indian Culture – Relevance of Upanishads for modern times – A few Upanishad Personalities: Nachiketas, SatyakamaJabala, Aruni, Shvetaketu.

22AVP205   Message of the Bhagavad Gita

Introduction to Bhagavad Gita – Brief storyline of Mahabharata - Context of Kurukshetra War – The anguish of Arjuna – Counsel by Sri. Krishna – Key teachings of the Bhagavad Gita – Karma Yoga, Jnana Yoga and Bhakti Yoga - Theory of Karma and Reincarnation – Concept of Dharma – Concept of Avatar - Relevance of Mahabharata for modern times.

22AVP206 Life and Message of Swami Vivekananda

Brief Sketch of Swami Vivekananda's Life – Meeting with Guru – Disciplining of Narendra - Travel across India - Inspiring Life incidents – Address at the Parliament of Religions – Travel in United States and Europe – Return and reception India – Message from Swamiji's life.

22AVP207 Life and Teachings of Spiritual Masters India

Sri Rama, Sri Krishna, Sri Buddha, AdiShankaracharya, Sri Ramakrishna Paramahamsa, Swami Vivekananda, Sri RamanaMaharshi, Mata Amritanandamayi Devi.

22AVP208   Insights into Indian Arts and Literature

The aim of this course is to present the rich literature and culture of Ancient India and help students appreciate their deep influence on Indian Life - Vedic culture, primary source of Indian Culture – Brief introduction and appreciation of a few of the art forms of India - Arts, Music, Dance, Theatre.

22AVP209 Yoga and Meditation

The objective of the course is to provide practical training in YOGA ASANAS with a sound theoretical base and theory classes on selected verses of Patanjali's Yoga Sutra and Ashtanga Yoga. The coverage also includes the effect of yoga on integrated personality development.

22AVP210 Kerala Mural Art and Painting

Mural painting is an offshoot of the devotional tradition of Kerala. A mural is any piece of artwork painted or applied directly on a wall, ceiling or other large permanent surface. In the contemporary scenario Mural painting is not restricted to the permanent structures and are being done even on canvas. Kerala mural paintings are the frescos depicting mythology and legends, which are drawn on the walls of temples and churches in South India, principally in Kerala. Ancient temples, churches and places in Kerala, South India, display an abounding tradition of mural paintings mostly dating back between the 9th to 12th centuries when this form of art enjoyed Royal patronage. Learning Mural painting through the theory and practice workshop is the objective of this course.

22AVP213 Traditional Fine Arts of India

India is home to one of the most diverse Art forms world over. The underlying philosophy of Indian life is 'Únity in Diversity" and it has led to the most diverse expressions of culture in India. Most art forms of India are an expression of devotion by the devotee towards the Lord and its influence in Indian life is very pervasive. This course will introduce students to the deeper philosophical basis of Indian Art forms and attempt to provide a practical demonstration of the continuing relevance of the Art.

22AVP214 Principles of Worship in India

Indian mode of worship is unique among the world civilizations. Nowhere in the world has the philosophical idea of reverence and worshipfulness for everything in this universe found universal acceptance as it in India. Indian religious life even today is a practical demonstration of the potential for realization of this profound truth. To see the all-pervading consciousness in everything, including animate and inanimate, and constituting society to realise this truth can be seen as the epitome of civilizational excellence. This course will discuss the principles and rationale behind different modes of worship prevalent in India.

22AVP215   Temple Mural Arts in Kerala

The traditional percussion ensembles in the Temples of Kerala have enthralled millions over the years. The splendor of our temples makes art enthusiast spellbound, warmth and grandeur of color combination sumptuousness of the outline, crowding of space by divine or heroic figures often with in vigorous movement are the characteristics of murals.

The mural painting specially area visual counterpart of myth, legend, gods, dirties, and demons of the theatrical world, Identical myths are popular the birth of Rama, the story of Bhīma and Hanuman, Shiva, as Kirata, and the Jealousy of Uma and ganga the mural painting in Kerala appear to be closely related to, and influenced by this theatrical activity the art historians on temple planes, wood carving and painting the architectural plane of the Kerala temples are built largely on the pan-Indians almost universal model of the Vasthupurusha.

22AVP218 Insights into Indian Classical Music

The course introduces the students into the various terminologies used in Indian musicology and their explanations, like Nadam, Sruti, Svaram – svara nomenclature, Stayi, Graha, Nyasa, Amsa, Thala,- Saptatalas and their angas, Shadangas, Vadi, Samavadi, Anuvadi. The course takes the students through Carnatic as well as Hindustani classical styles.

22AVP219 Insights into Traditional Indian Painting

The course introduces traditional Indian paintings in the light of ancient Indian wisdom in the fields of aesthetics, the Shadanga (Sixs limbs of Indian paintings) and the contextual stories from ancient texts from where the paintings originated. The course introduces the painting styles such as Madhubani, Kerala Mural, Pahari, Cheriyal, Rajput, Tanjore etc.

22AVP220 Insights into Indian Classical Dance

The course takes the students through the ancient Indian text on aesthetics the Natyasastra and its commentary the AbhinavaBharati. The course introduces various styles of Indian classical dance such as Bharatanatyan, Mohiniyatton, Kuchipudi, Odissy, Katak etc. The course takes the students through both contextual theory as

well as practice time.

22AVP221 Indian Martial Arts and Self Defense

The course introduces the students to the ancient Indian system of self-defense and the combat through various martial art forms and focuses more on traditional Kerala's traditional KalariPayattu. The course introduces the various exercise technique to make the body supple and flexible before going into the steps and techniques of the martial art. The advanced level of this course introduces the technique of weaponry.

PROFESSIONAL ELECTIVES UNDER SCIENCE STREAM

CHEMISTRY

23CHY240	COMPUTATIONAL CHEMISTRY AND MOLECULAR MODELLING	L-T-P-C: 3-0-0-3

Course Outcomes:

CO1:   Get to understand the structure of molecules using symmetry.
CO2:   Understanding Quantum mechanical approach to calculate the energy of a system.
CO3:   Applying mathematical knowledge and quantum mechanical approach in finding out the characteristics-reactivity, stability, etc., of the molecule.
CO4:   To get a brief idea about molecular mechanics based chemical calculations.CO5: To get an idea about general methodology of molecular modeling.

Syllabus

Unit 1
Introduction: Stability, symmetry, homogeneity and quantization as the requirements of natural changes - Born - Haber cycle – Energetic – kinetics - Principles of spectra.

Computational techniques: Introduction to molecular descriptors, computational chemistry problems involvingiterative methods, matrix algebra, Curve fitting.

Molecular mechanics: Basic theory - Harmonic oscillator – Parameterization - Energy equations - Principle ofcoupling - Matrix formalism for two masses - Hessian matrix - enthalpy of formation - enthalpy of reactions.

Introduction to Quantum mechanics - Schrodinger equation - Position and momentumMO formation - Operators and the Hamiltonian operator - The quantum oscillator Oscillator Eigen value problems - Quantum numbers - labeling of atomic electrons.

Unit 2
Molecular Symmetry: Elements of symmetry - Point groups - Determination of point groups of molecules.

Huckel's MO theory: Approximate and exact solution of Schrodinger equation - Expectation value of energy - Huckel's theory and the LCAO approximation - Homogeneous simultaneous equations - Secular matrix - Jacobi method - Eigen vectors: Matrix as operator - Huckel's coefficient matrix - Wheeland's method - Hoffmann's EHT method - Chemical applications such as bond length, bond energy, charge density, dipole moment, Resonance energy.

Unit 3
Self consistent fields: Elements of secular matrix - Variational calculations - Semi empirical methods - PPP self consistent field calculation - Slater determinants - Hartree equation - Fock equation – Roothaan - Hall equation - Semi empirical models and approximations.

Ab-initio calculations: Gaussian implementations – Gamess - Thermodynamic functions - Koopman's theorem - Isodesmic reactions, DFT for larger molecules - Computer aided assignments/mini projects with softwares - Introduction to HPC in Chemical calculations.

Molecular modelling software engineering - Modeling of molecules and processes
Signals and signal processing in Chemistry - QSAR studies and generation of molecular descriptors - Applications of

chemical data mining - Familiarization with open source softwares useful for molecular modeling - Introduction tomolecular simulation - M.D. simulation.

Evaluation Pattern

Assessment	Internal	End Semester
Periodical 1 (P1)	15	
Periodical 2 (P2)	15	
*Continuous Assessment (CA)	20	
End Semester		50

*CA – Can be Quizzes, Assignment, Projects, and Reports.

23CHY241	ELECTROCHEMICAL ENERGY SYSTEMS AND PROCESSES	L-T-P-C: 3-0-0-3

Course Outcomes:

CO1: Understand the fundamental concepts of electrochemistry through electrode potential and reaction kinetics CO2: Learn the application of the electrochemical principles for the functioning and fabrication of industrial batteries and fuel cells

CO3: Acquire knowledge in solving numerical problems on applied electrochemistry

CO4: Analysis and practical problem solving in fabrication of batteries and fuel cells

CO5: Application of concepts and principle in industrial electrochemical processes

CO6: Evaluation of comprehensive knowledge through problem solving

Syllabus Unit 1

Background Theory: Origin of potential - electrical double layer - reversible electrode potential - standard hydrogen electrode - emf series - measurement of potential - reference electrodes (calomel and silver/silver chloride) indicator and ion selective electrodes - Nernst equation - irreversible processes - kinetic treatment - Butler- Volmer equation - Overpotential, activation, concentration and IR overpotential - its practical significance - Tafel equation and Tafel plots - exchange current density and transfer coefficients.

Unit 2

Batteries: Primary batteries: The chemistry, fabrication and performance aspects, packing classification and rating of the following batteries: (The materials taken their function and significance, reactions with equations, their performance in terms of discharge, capacity, and energy density to be dealt with). Zinc-carbon (Leclanche type), zinc alkaline (Duracell), zinc-air, zinc-silver oxide batteries; lithium primary cells - liquid cathode, solid cathode and polymer electrolyte types and lithium-ferrous sulphide cells (comparative account).

Secondary batteries: ARM (alkaline rechargeable manganese) cells, Lead acid and VRLA (valve regulated (sealed) lead acid), nickel-cadmium, nickel-zinc, nickel- metal hydride batteries, lithium ion batteries, ultra thin lithium polymer cells (comparative account). Advanced Batteries for electric vehicles, requirements of the battery - sodium-beta and redox batteries.

Unit 3

Reserve batteries and Fuel cells: Reserve batteries - water activated, electrolyte activated and thermally activated batteries - remote activation - pyrotechnic materials. Fuel Cells: Principle, chemistry and functioning - carbon, hydrogen-oxygen, proton exchange membrane (PEM), direct methanol(DMFC), molten carbonate electrolyte (MCFC) fuel cells and outline of biochemical fuel cells.

Electrochemical Processes: Principle, process description, operating conditions, process sequence and applications of Electroforming – production of waveguide and plated through hole (PTH) printed circuit boards by electrodeposition; Electroless plating of nickel, copper and gold; Electropolishing of metals; Anodizing of aluminium; Electrochemical machining of metals and alloys.

End Semester		50

*CA – Can be Quizzes, Assignment, Projects, and Reports.

23CHY242	FUELS AND COMBUSTION	L-T-P-C: 3-0-0-3

Course Objectives:

To provide the basic knowledge about fuels, rocket propellants and explosives.

Course Outcomes:

CO1:   Understand the types of fuels and variation in their
propertiesCO2:   Able to analyze the fuel content
CO3:   Obtain knowledge in identifying a proper fuel as per the requirement
CO4:   Ability to know the preparation and working of propellants and
explosives

SyllabusUnit 1
Fuels - Solid fuels - Classification, preparation, cleaning, analysis, ranking and properties - action of heat, oxidation, hydrogenation, carbonization, liquefaction and gasification.

Liquid fuels – Petroleum - origin, production, composition, classification, petroleum processing, properties, testing -flow test, smoke points, storage and handling.

Secondary liquid fuels - Gasoline, diesel, kerosene and lubricating oils. Liquid fuels - refining, cracking, fractional distillation, polymerization. Modified and synthetic liquid fuels. ASTM methods of testing the fuels.

Unit 2
Gaseous fuels - Types, natural gas, methane from coal mine, water gas, carrier gas, producer gas, flue gas, blast furnace gas, biomass gas, refinery gas, LPG - manufacture, cleaning, purification and analysis. Fuels for spark ignition engines, knocking and octane number, anti knock additives, fuels for compression, engines, octane number, fuels forjet engines and rockets.

Flue gas analysis by chromatography and sensor techniques.

Unit 3
Combustion: Stochiometry, thermodynamics. Nature and types of combustion processes - Mechanism - ignition temperature, explosion range, flash and fire points, calorific value, calorific intensity, theoretical flame temperature. Combustion calculations, theatrical air requirements, flue gas analysis, combustion kinetics – hydrogen - oxygen reaction and hydrocarbon - oxygen reactions.

Rocket propellants and Explosives - classification, brief methods of preparation, characteristics; storage and handling.

23CHY243	GREEN CHEMISTRY AND TECHNOLOGY	L-T-P-C: 3-0-0-3

Course Objectives:

1. Understand the principles of green chemistry and its contribution to the development of sustainable products
2. Possess knowledge of the migration from a hydrocarbon-based economy to carbohydrate-based economy
3. Evaluate the deficiencies of traditional process and acknowledge the invent of new processes
4. Distinctly map the culmination of academic research to industrial chemistry

Course Outcomes:

CO1:   Understand the evolving concept of Green Chemistry and its application to the manufacture of sustainableproducts

CO2:   Appreciate the need for Renewable energy and Feed stock along with carbon sequestration through thefundamentals of Green Chemistry Techniques

CO3:   Develop a coherence to evaluate systematic deficiencies in traditional Chemical science process and products CO4: Undertake a purposeful Journey through the microscopic domain of academic research to the macroscopic

domain of Industrial chemistry

SyllabusUnit 1

Our environment and its protection, chemical pollution and environmental regulations, environmental chemistry, pollution prevention strategies, challenges to the sustainability of chemical industry, Pollution Prevention Act 1990,USA, Green Chemistry and its 12 principles, toxicity of chemicals, material safety data sheet (MSDS), concept ofzero pollution technologies, atom economy, functional toxicity vs non-functional toxicity, alternative solvents, energy minimization, microwave and sonochemical reactions, renewable feed stock, carbon dioxide as a feed stock.

Unit 2

Greener strategies of the synthesis of ibuprofen synthesis, teriphthalic acid etc. phase behaviour and solvent attributes of supercritical CO_2, use of supercritical carbon dioxide as a medium chemical industry, use of ionic liquids as a synthetic medium, gas expanded solvents, superheated water, etc. Synthesis of various chemicals from bio mass, polycarbonate synthesis and CO_2 fixation, green plastics, green oxidations, etc.

Unit 3

Processes involving solid catalysts – zeolites, ion exchange resins, Nafion/silica nano composites and enhanced activity. Polymer supported reagents, green oxidations using TAML catalyst, membrane reactors. Green chemistry in material science, synthesis of porous polymers, green nanotechnology.

23CHY244	INSTRUMENTAL METHODS OF ANALYSIS	L-T-P-C: 3-0-0-3

Course Outcomes:

CO1:	To develop an understanding of principle and working of the range of instrumental methods in analyticalchemistry

CO2:	To provide an understanding and skills in contemporary methods of separation and appropriate selection ofinstruments for the successful analysis of chemical compounds

CO3:	To impart skills in the scientific method of planning, conducting, reviewing, reporting experiments andproblem solving in chemical analysis.

SyllabusUnit 1

Error Analysis and Sampling: Accuracy - Precision - Classification of Errors -Minimization of errors - Standard deviation - Coefficient of variance - F-test - t-test - Significant figures. Sampling - Basis of sampling, Sampling andphysical state - Safety measures of sampling.

Separation Techniques: Brief out line of column, paper and thin layer chromatography - Ion exchange methods - principle and application – HPLC.

Unit 2

Gas chromatography - principle and applications – gel chromatography.

Electroanalytical techniques: Potentiometry - Potentiometric titration - determination of equivalence point - acidbase, complexometric, redox and precipitation titrations - merits and demerits. Voltammetry - Cyclic voltammetry -basic principle and application - Polarography - introduction - theoretical principles - migration current - residual current - half wave potential - instrumentation - analytical applications.

Unit 3

Spectro-chemical techniques: UV-VIS spetrophotometry - principle - Beer's Law application - photometric titration - single and double beam spectrophotometer - instrumentation of IR - sample handling - IR applications - H - NMR - Instrumentation and applications – principle - instrumentation - applications of atomic absorption spectroscopy.

Thermal and Diffraction techniques: Principles and applications of DTG - DTA DSC - X-ray - Electron DiffractionStudies - SEM, TEM.

23CHY245	BATTERIES AND FUEL CELLS	L-T-P-C: 3-0-0-3

Course Objective:

To provide sound knowledge on the application of electrochemistry in energy storage systems.

Course Outcome

CO1: Understand the fundamental concepts of electrochemistry through electrode potential and reaction kinetics CO2: Learn the application of the electrochemical principles for the functioning and fabrication industrial batteries and fuel cells

CO3: Analysis of practical problem solving in fabricating batteries and fuel cells

CO4: Evaluation of comprehensive knowledge through problem solving

SyllabusUnit 1

Background Theory: Origin of potential - electrical double layer - reversible electrode potential - standard hydrogen electrode - emf series - measurement of potential - reference electrodes (calomel and silver/silver chloride) indicatorand ion selective electrodes - Nernst equation - irreversible processes - kinetic treatment - Butler- Volmer equation - Overpotential, activation, concentration and IR overpotential - its practical significance - Tafel equation and Tafelplots - exchange current density and transfer coefficients.

Unit 2

Batteries: Primary batteries: The chemistry, fabrication and performance aspects, packing classification and rating of the following batteries: (The materials taken their function and significance, reactions with equations, their performance in terms of discharge, capacity, and energy density to be dealt with). Zinc-carbon (Leclanche type), zinc alkaline (Duracell), zinc/air batteries; Lithium primary cells - liquid cathode, solid cathode and lithium-ferrous sulphide cells (comparative account).

Secondary batteries: Lead acid and VRLA (valve regulated (sealed) lead acid), nickel-cadmium, nickel-zinc, nickel-metal hydride batteries, lithium ion batteries, ultrathin lithium polymer cells (comparative account). Advanced Batteries for electric vehicles, requirements of the battery - sodium-beta and redox batteries.

Unit 3

Fuel Cells: Description, working principle, anodic, cathodic and cell reactions, fabrication of electrodes and other components, applications, advantages, disadvantages and environmental aspects of the following types of fuel cells: Proton Exchange Membrane Fuel Cells, alkaline fuel cells, phosphoric acid, solid oxide, molten carbonate, direct methanol fuel cells.

Membranes for fuel cells: Nafion – Polymer blends and composite membranes; assessment of performance – recent developments.

Fuels for Fuel Cells: Hydrogen, methane, methanol - Sources and preparation, reformation processes for hydrogen –clean up and storage of the fuels – use in cells, advantages and disadvantages of using hydrogen as fuel.

23CHY246	CORROSION SCIENCE	L-T-P-C: 3-0-0-3

Course Outcome:

CO1:   Development of skill in identifying the nature and type of
corrosionCO2: Understanding the mechanism of various types of corrosion
CO3:   Analysing the problem and find out a solution to combat corrosion in any sort of environment.

CO-PO Mapping

CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3	PSO4

CO3	-	3	3	3	2	3	3	-	-	-	-	1	3	2	3	-

SyllabusUnit 1
Basic principles: Free energy concept of corrosion - different forms of corrosion - Thermodynamic & Kinetic aspects of corrosion: The free energy criterion of corrosion possibility - Mechanism of Electrochemical corrosion - Galvanicand Electrochemical series and their significance.

Corrosion Control: Materials selection - metals and alloys - metal purification - non metallic - changing medium.

Unit 2
Anodic and cathodic protection methods - Coatings - metallic and other inorganic coatings - organic coatings - stray current corrosion - cost of corrosion control methods.

Corrosion protection by surface treatment: CVD and PVD processes - Arc spray - Plasma spray - Flame spray.Corrosion

Inhibitors: Passivators - Vapour phase inhibitor.

Unit 3
Stress and fatigue corrosion at the design and in service condition - control of bacterial corrosion.

Corrosion protection: Automobile bodies – engines – building construction.

PHYSICS

23PHY240	ADVANCED CLASSICAL DYNAMICS	L-T-P-C: 3-0-0-3

Course Outcomes:

CO1: Able to use the Lagrangian formalism to solve simple dynamical system

CO2: Able to understand Hamiltonian formalism and apply this in solving dynamical systems

CO3: Able to apply Lagrangian formalism in bound and scattered states with specific reference to Kepler's lawsand Scattering states

CO4: Able to solve problems in the Centre of Mass frame and connect it to Laboratory Frame of ReferenceCO5: Understand and solve problems in rigid body rotations applying of Euler's equations.

CO-PO Mapping

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	3	1	1	0	0	0	0	0	0	0	1	0	0	0
CO2	3	3	1	1	0	0	0	0	0	0	0	1	0	0	0

CO4	3	3	3	1	0	0	0	0	0	0	0	2	0	0	0
CO5	3	3	3	2	0	0	0	0	0	0	0	2	0	0	0

SyllabusUnit 1

Introduction to Lagrangian dynamics

Survey of principles, mechanics of particles, mechanics of system of particles, constraints, D'Alembert's principle and Lagrange's equation, simple applications of the Lagrangian formulation, variational principles and Lagrange's equations, Hamilton's principles, derivation of Lagrange's equations from Hamilton's principle, conservation theorems and symmetry properties.

Unit 2

Central field problem

Two body central force problem, reduction to the equivalent one body problem, Kepler problem, inverse square lawof force, motion in time in Kepler's problem, scattering in central force field, transformation of the scattering to laboratory system, Rutherford scattering, the three body problem.

Rotational kinematics and dynamics

Kinematics of rigid body motion, orthogonal transformation, Euler's theorem on the motion of a rigid body.

Unit 3

Angular momentum and kinetic energy of motion about a point, Euler equations of motion, force free motion of rigid body.

Practical rigid body problems

Heavy symmetrical spinning top, satellite dynamics, torque-free motion, stability of torque-free motion - dual-spin spacecraft, satellite maneouvering and attitude control - coning maneuver - Yo-yo despin mechanism - gyroscopic attitude control, gravity- gradient stabilization.

TEXTBOOKS:

23PHY241	ELECTRICAL ENGINEERING MATERIALS	L-T-P-C: 3-0-0-3

Course Outcomes

CO1: To understand the nature of interaction between atoms in crystalline solid materials that determines their dielectric, magnetic and electrical properties.

CO2: Analyze the relation between the macroscopic dielectric constant and the atomic structure of an insulator.

CO3: Fundamental concepts of magnetic fields required to illustrate the magnetic dipoles. This forms the basis to understand the magnetic properties of dia, para, ferro, antiferro and ferri magnetic materials.

CO4: Fundamentals concerned with conduction mechanism in metals and superconductors.

CO5: Understand the basics for classification of materials based on its conductivity, nature of chemical bonds inSi and Ge, carrier density, energy band structure and conduction mechanism in intrinsic and extrinsic semiconductors.

CO-PO Mapping

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	1	1											1	-
CO2	2	2	2										1	-
CO3	2	2	2										2	-
CO4	2	2	2										2	-
CO5	2	2	2					2					1	-

SyllabusUnit 1

Conducting materials: The nature of chemical bond, crystal structure Ohm's law and the relaxation time, collisiontime, electron scattering and resistivity of metals, heat developed in a current carrying conductor, thermal conductivity of metals, superconductivity.

Semiconducting materials: Classifying materials as semiconductors, chemical bonds in Si and Ge and it'sconsequences, density of carriers in intrinsic semiconductors, conductivity of intrinsic semiconductors, carrier densities in n type semiconductors, n type semiconductors, Hall effect and carrier density.

Unit 2

Magnetic materials: Classification of magnetic materials, diamagnetism, origin of permanent, magnetic dipoles in matter, paramagnetic spin systems, spontaneous magnetization and Curie Weiss law, ferromagnetic domains and coercive force, anti ferromagnetic materials, ferrites and it's applications.

Unit 3

Dielectric materials: Static dielectric constant, polarization and dielectric constant, internal field in solids and liquids, spontaneous polarization, piezoelectricity.

PN junction: Drift currents and diffusion currents, continuity equation for minority carriers, quantitative treatment of

the p-n junction rectifier, the n-p-n transistor.

23PHY242	PHYSICS OF LASERS AND APPLICATIONS	L-T-P-C: 3-0-0-3

Unit 1

Review of some basic concepts and principle of laser.

Introduction to light and its properties: Reflection, refraction, interference, diffraction and polarization. Photometry – calculation of solid angle. Brewster's law. Snell's law and, its analysis.

Introduction to LASERS: Interaction of radiation with matter - induced absorption, spontaneous emission, stimulated emission. Einstein's co-efficient (derivation). Active material. Population inversion – concept and discussion about different techniques. Resonant cavity.

Unit 2

Properties of LASERS

Gain mechanism, threshold condition for PI (derivation), emission broadening - line width, derivation of FWHM natural emission line width as deduced by quantum mechanics - additional broadening process: collision broadening, broadening due to dephasing collision, amorphous crystal broadening, Doppler broadening in laser and broadeningin gases due to isotope shifts. Saturation intensity of laser, condition to attain saturation intensity.

Properties – coherency, intensity, directionality, monochromaticity and focussibility. LASER transition – role of electrons in LASER transition, levels of LASER action: 2 level, 3 level and 4 level laser system.

Unit 3

Types of LASERS

Solid state LASER: (i) Ruby LASER – principle, construction, working and application. (ii) Neodymium (Nd) LASERS. gas LASER: (i) He-Ne LASER - principle, construction, working and application. (i) CO_2 LASER - principle, construction, working and application.

Liquid chemical and dye LASERS. Semiconductor LASER: Principle, characteristics, semiconductor diode LASERS, homo-junction and hetero-junction LASERS, high power semi conductor diode LASERS.

Applications in Communication field:

LASER communications: Principle, construction, types, modes of propagation, degradation of signal, analogue communication system, digital transmission, fiber optic communication.

Applications of LASERS in other fields:

Holography: Principle, types, intensity distribution, applications. laser induced fusion. Harmonic generation. LASER spectroscopy. LASERS in industry: Drilling, cutting and welding. Lasers in medicine: Dermatology, cardiology, dentistry and ophthalmology.

23PHY243	CONCEPTS OF NANOPHYSICS AND NANOTECHNOLOGY	L-T-P-C: 3-0-0-3

Course Outcomes

CO1:   Understand, Comprehend and acquaint with concepts of NanoPhysics
CO2:   To familiarize the material's property changes with respect to the dimensional confinements.
CO3:   Acquire knowledge on the modern preparation process and analysis involved in the nanomaterial's research CO4: To learn about the technological advancements of the nano-structural materials and devices in the engineering applications

CO-PO Mapping

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	3	2												
CO2	2	3												
CO3				3										
CO4						3	2					1		

Syllabus Unit 1

Introduction

Introduction to nanotechnology, comparison of bulk and nanomaterials – change in band gap and large surface to volume ratio, classification of nanostructured materials. Synthesis of nanomaterials - classification of fabrication methods – top down and bottom up methods.

Concept of quantum confinement and phonon confinement

Basic concepts – excitons, effective mass, free electron theory and its features, band structure of solids. Bulk to nano transition – density of states, potential well - quantum confinement effect – weak and strong confinement regime. Electron confinement in infinitely deep square well, confinement in two and three dimension. Blue shift of band gap - effective mass approximation. Vibrational properties of solids - phonon confinement effect and presence of surface modes.

Unit 2

Tools for characterization:

Structural – X-ray diffraction, transmission electron microscope,scanning tunneling microscope, atomic force microscope. Optical - UV – visible absorption and photoluminescence techniques, Raman spectroscopy.

Nanoscale materials – properties and applications:

Carbon nanostructures – structure, electrical, vibration and mechanical properties. Applications of carbon nanotubes

Unit 3

Field emission and shielding − computers − fuel cells − chemical sensors − catalysis − mechanical reinforcement. Quantum dots and Magnetic nanomaterials – applications.

Nanoelectronics and nanodevices:

Impact of nanotechnology on conventional electronics. Nanoelectromechanical systems (NEMSs) − fabrication (lithography) and applications. Nanodevices - resonant tunneling diode, quantum cascade lasers, single electron transistors – operating principles and applications.

| 23PHY244 | PHYSICS OF SEMICONDUCTOR DEVICES | L-T-P-C: 3-0-0-3 |

Course Outcomes:

CO1:   Understand, comprehend and acquaint with the basics working principles and governing equations ofelectronic devices like diodes, Bipolar junction transistors, Mosfet and heterojunction transistors

CO2:   Analyze and Solve physics problems pertaining to various process like charge conduction across semiconductor device.

CO3:   Apply the knowledge for the development and design of new methods to determine semiconductorparameters and devices

SyllabusUnit 1

Introduction: Unit cell, Bravais lattices, crystal systems, crystal planes and Miller indices, symmetry elements. Defects and imperfections – point defects, line defects, surface defects and volume defects

Electrical conductivity: Classical free electron theory – assumptions, drift velocity, mobility and conductivity, drawbacks. quantum free electron theory – Fermi energy, Fermi factor, carrier concentration. Band theory of solids –origin of energy bands, effective mass, distinction between metals, insulators and semiconductors.

Unit 2

Theory of semiconductors: Intrinsic and extrinsic semiconductors, band structure of semiconductors, carrier concentration in intrinsic and extrinsic semiconductors, electrical conductivity and conduction mechanism in semiconductors, Fermi level in intrinsic and extrinsic semiconductors and its dependence on temperature and carrier concentration. Carrier generation - recombination, mobility, drift-diffusion current. Hall effect.

Theory of p-n junctions – diode and transistor:p-n junction under thermal equilibrium, forward bias, reverse bias, carrier density, current, electric field, barrier potential. V-I characteristics, junction capacitance and voltage breakdown.

Unit 3

Bipolar junction transistor, p-n-p and n-p-n transistors: principle and modes of operation, current relations. V-I characteristics. Fundamentals of MOSFET, JFET. Heterojunctions – quantum wells.

Semiconducting devices: Optical devices: optical absorption in a semiconductor, e--hole generation. Solar cells – p-n junction, conversion efficiency, heterojunction solar cells. Photo detectors – photo conductors, photodiode, p-i-n diode. Light emitting diode (LED) – generation of light, internal and external quantum efficiency.

Modern semiconducting devices: CCD - introduction to nano devices, fundamentals of tunneling devices, design considerations, physics of tunneling devices.

TEXTBOOKS:

23PHY245	ASTROPHYSICS	L-T-P-C: 3-0-0-3

Course Outcomes:

After completion of the course students should be able to
CO1:   Get a broad knowledge of scientific and technical methods in astronomy and
astrophysics.CO2:Apply mathematical methods to solve problems in astrophysics.
CO3:   Develop critical/logical thinking, scientific reasoning and skills in the area of modern astrophysics.

CO-PO Mapping:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	3											1		
CO2	2	2												
CO3	1	2												

SyllabusUnit 1
Historical introduction: Old Indian and western – astronomy - Aryabhatta, Tycho Brahe, Copernicus, Galileo - Olbers paradox - solar system – satellites, planets, comets, meteorites, asteroids.

Practical astronomy - telescopes and observations & techniques – constellations, celestial coordinates, ephemeris.

Celestial mechanics - Kepler's laws - and derivations from Newton's laws.

Sun: Structure and various layers, sunspots, flares, faculae, granules, limb darkening, solar wind and climate.

Unit 2
Stellar astronomy: H-R diagram, color-magnitude diagram - main sequence - stellar evolution – red giants, white dwarfs, neutron stars, black holes - accretion disc - Schwartzchild radius - stellar masses Saha–Boltzman equation -derivation and interpretation.

Variable stars: Cepheid, RR Lyrae and Mira type variables - Novae and Super novae. Binary and multiple star system - measurement of relative masses and velocities. Interstellar clouds - Nebulae.

Unit 3
Galactic astronomy: Distance measurement - red shifts and Hubble's law – age of the universe, galaxies – morphology - Hubble's classification - gravitational lens, active galactic nuclei (AGNs), pulsars, quasars.

Relativity: Special theory of relativity - super-luminal velocity - Minkowski space - introduction to general theory ofrelativity – space - time metric, geodesics, space-time curvature. Advance of perihelion of Mercury, gravitational lens.

Cosmology: Comic principles, big bang and big crunch – cosmic background radiation - Nucleo-synthesis - planklength and time, different cosmic models - inflationary, steady state. Variation of G. anthropic principle.

MATHEMATICS

23MAT240	STATISTICAL INFERENCE	L-T-P-C: 3-0-0-3

Syllabus

Unit 1
Introduction to Statistics: Data Collection and Descriptive Statistics, Populations and Samples, describing data sets, summarizing data sets, Normal Data Sets, Paired Data Sets and the Sample Correlation Coefficient. Review of Random Variables and Distributions, Distributions of Sampling Statistics, The Sample Mean, The Central Limit Theorem, The Sample Variance, Sampling Distributions from a Normal Population, Distribution of the Sample Mean, Joint Distribution of $\bar{X}$ and S^2, Sampling from a Finite Population.

Unit 2
Parameter Estimation: Introduction, Maximum Likelihood Estimators, Interval Estimates, Estimating the Difference in Means of Two normal populations, Approximate Confidence Interval for the Mean of a Bernoulli random variable, Confidence Interval of the Mean of the Exponential Distribution, Evaluating a Point Estimator, The Bayes Estimator. Hypothesis Testing: Introduction, Significance Levels, Tests Concerning the Mean of a Normal Population, Testing the Equality of Means of Two Normal Populations, Hypothesis Tests Concerning the Variance of a Normal Population, Tests Concerning the Mean of a Poisson Distribution.

Unit 3
Regression: Introduction, Least Squares Estimators of the Regression Parameters, Distribution of the Estimators, Statistical Inferences about the Regression Parameters, the Coefficient of Determination and the Sample Correlation Coefficient, Analysis of Residuals, transforming to Linearity, Weighted Least Squares, Polynomial Regression, Multiple Linear Regression, Predicting Future Responses, Logistic Regression Models for Binary Output Data.

23MAT241	INTRODUCTION TO GAME THEORY	L-T-P-C: 3-0-0-3

Syllabus

Unit 1
Elements of Game theory, examples, Strategic Games, 2 Player Strategy Games, payoffs, Minimax, Weak and Strong Domination, Saddle Points, Nash Equilibrium, Prisoner's Dilemma, Stag Hunt, Matching pennies, BOS, Multi NE, Cooperative and Competitive Games, Strict and Non Strict NE, Best response functions for NE.

Unit 2
Combinatorial games, Winning and losing positions, Subtraction Game, 3-Pile and K-Pile Games, Proof of Correctness, Variations of K-Pile Games, Graph Games, Construction, Proof of finiteness, SG theorem for sum of games.

Unit 3
Cournot's Oligopoly, Bertrand's Oligopoly, Electoral Competition, Median Voter Theorem, Auctions, role of knowledge, Decision making and Utility Theory, Mixed Strategy Equilibrium, Extensive Games with Perfect Information, Stackelberg's model of Duopoly, Buying Votes, Committee Decision making, Repeated Gmes, Prisoner's Dilemma, Supermodular Game and Potential games

23MAT242	NUMERICAL METHODS AND OPTIMIZATION	L-T-P-C: 3-0-0-3

Syllabus

09 (a) Roots finding methods:
Roots of Transcendental and Polynomial Equations: Bisection method, Iteration methods based on first degree equation, Rate of convergence, system of nonlinear equations.

09 (b) Interpolations:
Interpolation and Approximation: Lagrange, Newton's Divided Difference, Newton's Forward and Backward interpolations.

07 (b) Multivariable optimization (2 Credits)
Optimality criteria – unidirectional search – direct search methods – gradient based methods. Lagrangian and Kuhn-Tucker conditions.

23MNG331	FINANCIAL MANAGEMENT	L-T-P-C: 3-0-0-3

Course Objectives

- Understand the overview of financial management
- Inculcate methods and concepts on valuation
- Familiarize with working capital management, financial analysis and planning

Course Outcomes

CO1: Understand and apply time value concept of money and use this for investment criteria decisions.
CO2: Evaluate the risk and return for various alternatives of investment.
CO3: Apply the capital budgeting techniques and evaluate the investment decisions.
CO4: Understand working capital management, cash and liquidity management and financial statements**. CO/PO**

Mapping

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	3					1	1		3	3	1			
CO2	3	3					2	1		3	3	1			
CO3	3	2					1	1		3	3	1			
CO4	3	2			1		2	1	2	3	3	1			

SyllabusUnit 1
Introduction: Financial Management an overview – Financial Decisions in a firm – Goal of FM – Function of the financial system.

Unit 2
Fundamental Valuation Concepts:Time value of money – Risk and Return. Capital Budgeting: Techniques of capital budgeting investment criteria– NPV – Benefit Cost Ratio – IRR – Payback Period – ARR – Investment appraisal inPractice – Estimation of Project cost flows.

Unit 3
Working Capital Management: Current Assets – Financing Ruling – Profit Criterion. Cash and Liquidity Management. Working Capital Financing.

Financial Analysis and Planning**:** financial instruments, sources of long-term, intermediate term and short term finance. Analyzing Financial Performance – Break – even analysis and Leverages – Financial Planning and Budgeting.

Mergers and Takeovers-International trade.

23MNG332	SUPPLY CHAIN MANAGEMENT	L-T-P-C: 3-0-0-3

Course Objectives

- Understand the complexity and key issues in supply chain management.
- Describe logistics networks, distribution planning, routing design and scheduling models.
- Familiarize dynamics of supply chain and the role of information in supply chain.
- Understand the issues related to strategic alliances, global supply chain management, procurement andoutsourcing strategies.

Course Outcomes

CO1: Analyze the complexity and key issues in supply chain management
CO2: Evaluate single and multiple facility location problems, logistics network configuration, vehicle routing and scheduling models
CO3: Analyze inventory management models and dynamics of the supply chain
CO4: Develop the appropriate supply chain through distribution requirement planning and strategic alliances
CO5: Identify the issues in global supply chain management, procurement and outsourcing strategies

CO/PO Mapping

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	1	1									1	3		
CO2	2	2	3	1						1	1	2	2		
CO3	3	3	3	3	2				3	1	1	3	2		
CO4	2	2	1	1						1	1	2	2		
CO5	3	3	3	1					3	1	1	3	2		

SyllabusUnit 1
Introduction: Introduction to SCM-the complexity and key issues in SCM – Location strategy – facility locationdecisions – single facility and multiple location models.
Logistics: Logistics Network Configuration – data collection-model and data validation- solution techniques-network configuration DSS – Transport strategy – Service choices: single service and inter modal services – vehicle routingand scheduling models – traveling salesman problems – exact and heuristic methods.

Unit 2
Inventory: Inventory Management and risk pooling-managing inventory in the SC. Value of Information-bullwhipeffect-lead time reduction.
Supply Chain Integration: Supply chain integration-distributed strategies-push versus pull systems. Distribution Requirements Planning – DRP and demand forecasting, DRP and master production scheduling. DRP techniques –time-phased order point – managing variations in DRP – safety stock determination-Strategic alliances-third partylogistics-distribution integration.

Unit 3
Issues in SCM**:** Procurement and outsourcing strategies – framework of e-procurement. International issues in SCM-regional differences in logistics. Coordinated product and supply chain design-customer value and SCM.

23MNG333	MARKETING MANAGEMENT	L-T-P-C: 3-0-0-3

Course Objective

To educate the students to apply concepts and techniques in marketing so that they become acquainted with the duties of a marketing manager with an emphasis to make the students exposed to the development, evaluation, and implementation of marketing management in a variety of business environments.

Course Outcomes

On successful completion of the Course students will be able to:

CO1: Illustrate key marketing concepts, theories and techniques for analysing a variety of marketing situations
CO2: Identify and demonstrate the dynamic nature of the environment in which marketing decisions are taken and appreciate the implication for marketing strategy determination and implementation
CO3: Develop the ability to carry out a research project that explores marketing planning and strategies for aspecific marketing situation
CO4: Understand the need and importance of sales promotions and make use of advertising
CO5: Manage a new product development process from concept to commercialization.
CO6: Illustrate the importance of modern trends in retailing and marketing logistics

CO/PO Mapping

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1			3	1								1			
CO2		1	3	3		2	1			2	2	2			
CO3	1	1	1	3	2	2	2		2	2	2	3			
CO4			2	2		2	1	1		3	3	3			
CO5	1	1	3	2		1	1			1	2	3			
CO6	1	1	3	2		1	1			1	2	3			

SyllabusUnit 1
Marketing Process: Definition, Marketing process, dynamics, needs, wants and demands, value and satisfaction, marketing concepts, environment, mix. Philosophies, selling versus marketing, organizations, industrial versus consumer marketing, consumer goods, industrial goods, product hierarchy.

Buying Behaviour and Market Segmentation: Major factors influencing buying behaviour, buying decision process, businessbuyingbehaviour. Segmenting consumer and business markets, market targeting.

UNIT 2
Product Pricing and Marketing Research: Objectives, pricing, decisions and pricing methods, pricing management. Introduction, uses, process of marketing research.

UNIT 3
Developing New Products - Challenges in new-product Development - Effective organizational arrangements - Managing the development Process: ideas - Concept to strategy - Development to commercialization – The consumer- adoption process.
Advertising Sales Promotion and Distribution: Characteristics, impact, goals, types, and sales promotions- point of

purchase- unique selling proposition. Characteristics, wholesaling, retailing, channel design, logistics, and modern trends in retailing.

23MNG334	PROJECT MANAGEMENT	L-T-P-C: 3-0-0-3

Course Objectives

- To discuss the project life cycle and build a successful project from pre-implementation to completion.
- To introduce different project management tools and techniques

Course Outcomes

CO1:   Appraise the selection and initiation of individual projects and its portfolios in an enterprise.
CO2:   Analyze the project planning activities that will predict project costs, time schedule, and
quality.**CO3:**   Develop processes for successful resource allocation, communication, and risk management.
CO4:   Evaluate effective project execution and control techniques that results in successful project completion

CO/PO Mapping

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2	3	2	2	1				2		3	1	2	3	2
CO2	2	3	3	2	2				3		3	2	2	3	3
CO3	1	2	3	2	2				2		3	2	1	2	3
CO4	1	1	2		1				2		3	1	1	1	2

SyllabusUnit 1
Overview of Project Management: Verities of project, Project Features, Project Life Cycle – S-Curve, J-C **Project Selection:** Project Identification and Screening – New ideas, Vision, Long-term objectives, SWOT Analysis (Strength, Weakness, Opportunities, Threats).
Project Appraisal – Market Appraisal, Technical Appraisal, Economic Appraisal, Ecological Appraisal, and Financial Appraisal – Payback, Net Present Value (NPV), Internal Rate of Returns (IRR).
Project Selection – Decision Matrix, Technique for Order Preference using Similarity to Ideal Solution (TOPSIS), Simple Additive Weighting (SAW).

Unit 2
Project Presentation: WBS, Project Network – Activity on Arrow (A-O-A), Activity on Node (A-O-N).**Project Scheduling:** Gant Chart, Critical Path Method (CPM), Project Evaluation & Review Technique (PERT).**(6hrs)**
Linear time cost trade-offs in project - Direct cost, indirect cost, Project crashingResource Consideration - Profiling, Allocation, Levelling.
Introduction to project management software: Primavera/ Microsoft project

Unit 3
Project Execution: Monitoring control cycle, Earned Value Analysis (EVA), Project Control – Physical control, Human control, financial control.
Organizational and Behavioral Issues: Organizational Structure, Selection-Project Manager, Leadership Motivation, Communication, Risk Management.
Project Termination: Extinction, Addition, Integration, Starvation.

23MNG335	ENTERPRISE MANAGEMENT	L-T-P-C: 3-0-0-3

Course Objectives

- To impart knowledge on the fundamentals of costing, pricing methods and strategies.
- To give an overview of production operations planning.
- To summarize various quantitative methods of plant location, layout and lean manufacturing.
- To familiarize the concepts of e-commerce, e-purchasing, MRP and ERP in business

Course Outcomes

At the end of the course, the student will be able to:

CO1: Understand the concepts of cost and pricing of goods and appraise project proposals
CO2: Design and analyze manufacturing and service processes and to measure the work performed.
CO3: Understand and analyze the key issues of supply chain Management
CO4: Understand the application of lean manufacturing tools and six sigma concepts
CO5: Select appropriate plant location and their layout methods
CO6: Create capacity plan, aggregate plan, schedule, ERP & MRP systems

CO/PO Mapping

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2	2	1	1							2	2			
CO2	2	1								1		2	1		1
CO3	2	1										2	1		1
CO4	2	1	1	1						1		2	1		1
CO5	2	1		1								2			
CO6	2	2	1	1							1	2	1		1

SyllabusUnit 1
Engineering Economics: cost concepts - types of costs - cost functions. Cost controls: reduction – tools & applications.Pricing policies – methods – problems.Process design and improvement – process capacity – process layout – process reengineering – job design. Work standards – work measurement – work sampling – problems.

Unit 2
Supply Chain Management – Basic Concepts, SC dynamics, push-pull boundary, integrated supply chain, logistics, customer relationship, supplier relationship – selection, rating and development, procurement, SC metrics and performance measurement - problems. Lean Manufacturing – concepts, wastes – tools viz., pull system, standardized work, takt time, kanban system, JIT, kaizen, SMED, 5S, value stream mapping, benefits of lean and implementation issues. Introduction to Six Sigma. Plant Location – globalization, factors affecting location decisions, facility location- Break-even method, rectilinear, factor-rating and centre of gravity – problems. Plant Layout – types, process layout,product layout, Systematic layout planning (SLP), Line Balancing problems. Capacity Planning – Aggregate Planning
    – importance, planning process, methods – problems.

Unit 3
Role of IT in business performance improvement – e-commerce – e-purchasing –Master Production Schedule, inventory lot sizing strategies, MRP basics – MRP explosion, Available to Promise(ATP) inventory – MRP calculations – MRP II – Scheduling – Gantt chart – Introduction to ERP – ERP software – ERP modules – ERP implementation.

23MNG336	OPERATIONS RESEARCH	L-T-P-C: 3-0-0-3

Course Objectives

Familiarizing the students with quantitative tools and techniques, which are frequently applied in operational decisions

Course Outcomes

CO1:   Formulate operations research models to optimize resources.
CO2:   Solve transportation and assignment problems using suitable techniques.
CO3:   Apply appropriate technique to analyze a project with an objective to optimize resources.
CO4:   Solve operational problems using decision theory approaches.
CO5:   Select suitable inventory model for effective utilisation of resources.
CO6:   Solve Operations Research problems using software package

CO/PO Mapping

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	2	2		2						2	2	2		
CO2	3	2	2		2						2	2	2		
CO3	3	2	2		2						2	2	2		
CO4	3	2	2		2						2	2	2		
CO5	3	2	2		2						2	2	2		
CO6	3	2	2		2						2	2	2		

SyllabusUnit1
Linear Programming: Formulations - graphical solutions - Simplex Method - Duality, Dual simplex method.Transportation model: Assignment model – Travelling Salesman Problem.

Unit 2
Decision Theory: Decision Trees. Game theory - 2 person zero sum; mixed strategies; 2 x n and m x 2 games. Network Models- Project Networks- CPM / PERT- Project Scheduling – crashing networks and cost considerations-Resource leveling and smoothing - shortest route problem, minimal spanning tree problem, maximal flow problem.

Unit 3
Sequencing model – 2 machines 'n' jobs, 'm' machines 'n' jobs – n jobs 2 machines.
Inventory models: deterministic & probabilistic models. Quantity discounts. Selective Inventory Management Queuing models: Poisson arrival and exponential service times. Single server, multi-server. Queues -infinite and finite capacity queues.
Simulation –Monte Carlo simulation: simple problems

Lab session: Practicing case problems with excel solver/MatLab/LINGO package

23MEE321	INDUSTRIAL ENGINEERING	L-T-P-C: 3-0-0-3

Course Objectives

- To inculcate the concepts of work study and its application to industrial practice
- Impart skills to design, develop, implement, and improve manufacturing/service systems

Course Outcomes

At the end of the course, the student will be able to

CO1: Create value to organizations through the analysis, evaluation, and improvement of work systems using work study and method study
CO2: Develop work systems through motion economy principles
CO3: Apply work measurement techniques to improve productivity, fix wages and incentives
CO4: Apply systematic layout planning techniques and work station design principles based on ergonomics andmaterial handling.

CO/PO Mapping

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2	1	1	1						1		3	2		
CO2	2	1	2	1	1					1		3	2		
CO3	1	2		1	1						1	3	2		
CO4	2	2		1	2						2	3	2		

SyllabusUnit 1
Work System: Elements of work, maintenance of machines, interaction, effect of working conditions and environment, physical and mental fatigue.
Productivity: Productivity, factors affecting production, Measurement of productivity.
Work Study: Definition and scope of work study; Areas of application of work study in industry; Human aspects ofwork study.
Method Study: Information collection, recording techniques, and processing aids; critical examination; development, installation and maintenance of improved methods.

Unit 2
Motion Economy and Analysis: Principles of motion economy; Motion analysis; Micromotion and Memomotion study; Therbligs and SIMO charts; Normal work area and design of work places; Basic parameters and principles ofwork design.
Work Measurement: Work measurement techniques; Calculation of standard time, work sampling and predetermined Motion time systems.
Wages and Incentive Schemes: Introduction, wage payment of direct and indirect labour, wage payment plans and incentives, various incentive plans, incentives for indirect labour

Unit 3
Plant Layout: Concept of plant layout, types of layout; factors affecting plant layout.
Ergonomics: Ergonomic Design of equipment and work place. work station design, factors considered in designing awork station, ergonomic design standards - Study of development of stress in human body and their consequences.Case Studies.Production planning and scheduling.
Material Handling: Introduction and functions of material handling equipment, selection of material handling equipment for different requirements, safety requirements.

Recent advances in Industrial Engineering.

| 23MEE323 | MANAGERIAL STATISTICS | L-T-P-C: 3-0-0-3 |

Course Objective

To impart the knowledge of basic statistical tools for analysis and interpretation of qualitative and quantitativedata for decision making

Course Outcomes

CO1:   Apply basic probability and statistics concepts for various business problems
CO2:   Perform test of hypothesis
CO3:   Compute and interpret the result of regression and correlation analysis for forecasting
CO4:   Solve real time problems by applying different decision making methods.

CO/PO Mapping

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CO2	3	3		2	2						2	2	3		
CO3	3	3		2	2						2	2	3		
CO4	3	3		2	2						2	2	3		

SyllabusUnit 1
Quantitative methods: Basic terminology in probability, probability rules, conditions of statistical dependence and independence, Bayes Theorem, Discrete Random Variables review of probability distributions, measure of central tendency.
Sampling and sampling distributions: Introduction to sampling, random sampling, design of experiments, introduction to sampling distributions
Estimation: point estimates, interval estimates and confidence intervals, calculating interval estimates of mean from large samples, using t test, sample size estimation**.**

Unit 2
Testing hypothesis: Introduction, basic concepts, testing hypothesis, testing when population standard deviation is known and not known, two sample tests.
Chi-square and analysis of variance: introduction, goodness of fit, analysis of variance, inferences about a population variation

Unit 3
Regression and correlation: Estimation using regression line, correlation analysis, finding multiple regression equation, modelling techniques,
Non parametric methods and time series and forecasting: Sign test for paired data, rank sum test, rank correlation, Kolmogrov – smirnov test, variations in time series, trend analysis, cyclic variation, seasonal variation and irregular variation. Decision theory**:** Decision tree analysis

23MEE323	TOTAL QUALITY MANAGEMENT	L-T-P-C: 3-0-0-3

Course Objective

To impart knowledge on quality management principles, tools, techniques and quality standards for real lifeapplications

Course Outcomes

CO1: Evaluate the principles of quality management and to explain how these principles can be applied withinquality management systems.
CO2: Evaluate the performance measures using various quality and management tools
CO3: Apply the Quality Function Deployment, Taguchi principles, Total Productive Maintenance and Failure Mode and Effect Analysis concepts to solve industrial problems.
CO4: Practice the various quality system in industry.

CO/PO Mapping

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	1	2										2	2		
CO2	1	2										2	2		
CO3	2	2	2									2	2		
CO4	2	2	2	2								2	2		

SyllabusUnit 1
Definition of quality - dimensions of quality. Quality planning - quality costs. Total Quality Management: historical review and principles –leadership - quality council - quality statements - strategic planning - Deming philosophy.Barriers to TQM implementation

Unit 2
Customer satisfaction – Customer retention - Employee involvement - Performance appraisal - Continuous process improvement - Supplier partnership - Performance measures. Seven tools of quality.Statistical fundamentals - Control Charts for variables and attributes - Process capability - Concept of six sigma - New seven management tools
- Benchmarking**.**

Unit 3
Quality function deployment (QFD) - Taguchi quality loss function - Total Productive Maintenance (TPM) - FMEA.Need for quality systems - ISO 9000:2000 – Elements of quality systems (such as ISO 9000:2000). Implementation of quality system – documentation - quality auditing - QS 9000-ISO 14000

| 23MEE324 | LEAN MANUFACTURING | L-T-P-C: 3-0-0-3 |

Course Objectives

- Understand Lean manufacturing principles and tools
- Inculcate the concepts of value stream mapping
- Familiarize lean implementation practices

Course Outcomes

CO1: Identify key requirements and concepts in lean manufacturing.
CO2: Initiate a continuous improvement change program in a manufacturing organization**CO3:**
Analyze and improve a manufacturing system by applying lean manufacturing tools**CO4:** Build
value stream map for improving the productivity
CO5: Improve productivity through lean practices

CO/PO Mapping

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2											2	2		
CO2	2	2	2	1					2	1		1	2		1
CO3	2	2	2	2	1				2	1		1	2	1	2
CO4	2	2	2	1	1	1	1			1		2	2	1	1
CO5	2	2	2	1	1	1	1			1		2	2	1	1

Syllabus**Unit 1**
Introduction to Lean and Factory Simulation: History of Lean and comparison to other methods - The 7 Wastes, their
causes and the effects - An overview of Lean Principles / concepts / tools - Stockless Production.
The Tools of Lean Manufacturing: Continuous Flow – Continuous Flow Manufacturing and Standard Work Flow –5S and
Pull Systems (Kanban and ConWIP systems) – Error Proofing and Set-up Reduction – Total Productive Maintenance
(TPM) – Kaizen Event examples. Toyota production systems.
Ford production systems – FPS gear model

Unit 2
Value Stream Mapping – Current state: Preparation for building a Current State Value Stream Map – Building a Current
State Map (principles, concepts, loops, and methodology) – Application to the factory Simulation scenario.

Unit 3
Value Stream Mapping – Future State: Key issues in building the Future State Map – Process tips in building the map and
analysis of the customer loop, supplier loop, manufacturing loop and information loop – Example of completedFuture
State Maps – Application to factory simulation
Implementation of lean practices - Best Practices in Lean Manufacturing.

23CSE321	SOFTWARE PROJECT MANAGEMENT	L-T-P-C: 3-0-0-3

Course Objectives

- This course describes the key aspects of a software project.
- It introduces the basic principles of Engineering Software Projects. Most, if not all, students' complete projects as part of assignments in various courses undertaken. These projects range in size, subject and complexity but there are basic project essentials that need to be understood and practiced for successful team project outcomes.
- The course provides an understanding of the purpose, methods and benefits of process management by exposing the student to the concepts, practices, processes, tools and techniques used in process managementfor software development.

Course Outcomes

CO 1: To understand the basic concepts, terminologies and issues of software project management.
CO 2: To apply appropriate methods and models for the development of solutions.
CO 3: To analyze the cost-benefits of calculations so as to optimize the selection strategy**CO 4:** To evaluate methods, models and technologies towards achieving project success**CO 5:** To design and evaluate network planning models with criticality

CO-PO Mapping

PO/PSO CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

CO4	2	2	2	1	3	2	2	2	3	3		2	3	2
CO5	3	2	3	3	3	2	2	2	3	3		2	3	2

SyllabusUnit 1
Introduction to Software Project Management- Software Projects - ways of categorizing software projects – problems with software projects - Project Life Cycle– Management -Setting objectives –Stakeholders - Project Team- Step-wise
: An overview of project planning -project Evaluation –Selection Of Appropriate Project Objectives- Software Effort Estimation Techniques, Function Point Analysis-Object Point-COCOMO.

Unit 2
Activity planning-- project schedules - sequencing and scheduling projects - Network planning model – AON andAOA- identifying critical activities-Crashing And Fast Tracking-,Risk management—Categories , Risk planning, Management and Control - Evaluating risks to the schedule. PERT- Resource Allocation, Monitoring and Tracking -Monitoring and control - allocation - identifying resource requirements - scheduling resources - creating critical paths
- publishing schedule - cost schedules- sequence schedule.

Unit 3
Monitoring and control – Visualizing Progress, Earned value analysis, managing people and organizing teams- organizational structures- Planning for small projects. Case Study: PMBOK , Agile Development

23CSE322	FINANCIAL ENGINEERING	L-T-P-C: 3-0-0-3

Pre-Requisite(s): 19MAT112 Linear Algebra, 19MAT205 Probability and Random Processes

Course Objectives

- This course serves as an introduction to financial engineering including cash flows, financial decision making etc
- It gives a thorough yet highly accessible mathematical coverage of standard and recent topics of introductory investments: fixed-income securities, modern portfolio theory, optimal portfolio growth and valuation ofmulti-period risky investments.

Course Outcomes

CO1:   Apply basic concepts to understand and evaluate cash flows
CO2:   Evaluate and arrive at a financial investment decision employing the underlying knowledge of stocks andderivatives
CO3:   Analyse and design Portfolio selection methods
CO4:   Understand capital market theory for stock performance evaluation

CO-PO Mapping

PO/PSO CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	2	1			2								3	2
CO2	2	3	1										3	2
CO3	1	3			2								3	2
CO4	2	1											3	2

SyllabusUnit 1
Cash Flows and Fixed income securities: Investments and markets - Principal and interest - Present and future valuesof streams - IRR. Fixed income securities - Market value for future cash - Bond value - Bond details – Yields – Convexity – Duration - Immunization. Bond portfolio management - Level of market interest rates, Term structureof interest-rate theories.

Unit 2
Stocks and Derivatives: Common stock valuation - Present value of cash dividends - Earnings approach - Value versus price - Efficient markets theory - Technical analysis. Analysis of financial statements. Derivatives - futures and options
     - Black Scholes formula - Utility functions - Applications in financial decision making.

Unit 3
Portfolio analysis and capital market theory: Covariance of returns – Correlation - Portfolio return - Portfolio standard deviation - Two asset case - Efficient frontier - Optimum portfolio. Capital market theory - Capital market line - Sample diversifications to reduce risk - Characteristic line - Capital asset pricing model. Arbitrage price theory - Stock performance evaluation.

23CSE323	ENGINEERING ECONOMIC ANALYSIS	L-T-P-C: 3-0-0-3

Course Objectives

- Prepare engineering students to analyze and understand the business, impact of economic environment onbusiness decisions

Course Outcomes

CO1: Understand and evaluate the economic theories, cost concepts and pricing policies and draw inferences forthe investment decisions for appraisal and profitability
CO2: Appraise the dynamics of the market and market structures and portray implication for profit and revenuemaximization
CO3: Employ operations research and allied techniques in managerial economics for an enhanced analysis anddecision making

CO-PO Mapping

PO/PSO CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

CO2	1	3	2	1		2		2			3	2	3	2
CO3	2	3	2	2		2		2			3	2	3	2

SyllabusUnit 1
Economics: Nature and scope of managerial economics. Economic theory and managerial economics, Cost Concepts: Types of costs - Cost functions. Cost controls: reduction – Tools & Areas. Pricing policies- methods. Capital budgeting
- cost of capital. Appraising project profitability

Unit 2
The essentials of demand and supply: The law of demand. Market demand curve. Other determinants of market demand. The law of supply. Determinants of market supply. The market mechanism. Price elasticity of demand, Profit and revenue maximization: Optimal input combination. Total revenue maximization.

Unit 3
Market structure: Perfect competition and monopoly. Characteristics of monopolistic competition. Oligopoly Operations Research techniques in managerial economics: Inventory models. Theory of games. Decision theory, Risk and Uncertainty, Measuring risk, Consumer behavior and risk aversion, Decision making under uncertainty with complete ignorance

23CSE324	INFORMATION SYSTEMS	L-T-P-C: 3-0-0-3

Course Objectives

- This course is to expose the students to the managerial issues relating to information systems and alsounderstand the role of Business Process Reengineering technique in an organization.
- The course also focus on the management of information technology to provide efficiency and effectiveness or strategy decision making.

Course Outcomes

CO1: Understand the fundamental concepts of Information Systems in business.
CO2: Understand and analyse the strategic role played by Information Systems in e-commerce.
CO3: Analyse management challenges in Global Businesses predominantly dependent on IS functions.

CO-PO Mapping

PO/PSO CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	3												3	2
CO2	2	2			2								3	2
CO3	1	3			2	2					2	1	3	2

SyllabusUnit 1
Introduction to IS -Fundamental concepts-IS in Business- Role of IS –Information system and technologies – Components of IS –resources and acivities –Types of IS- E business Applications –Role of BI and Analytics in IS-Functional Business Systems - Marketing Systems, Manufacturing systems, Human Resource Systems, AccountingSystems and Financial Management Systems.-Cross-Functional Enterprise Systems Cross-Functional Enterprise Applications, Enterprise Application Integration, Transaction Processing Systems and Enterprise Collaboration Systems. Enterprice Business Systems CRM, ERP, SCM , Case Studies

Unit 2
Electronic Commerce Systems : Scope of e-Commerce, Essential e-Commerce Processes and Electronic Payment Processes - E-commerce Applications & Issues -Decision Support Systems- Business and Decision Support, Decision Support Trends, Management Information Systems, Online Analytical Processing, Decision Support Systems, Executive Information Systems, Enterprise Portals and Decision Support - Knowledge Management Systems. Artificial Intelligence Technologies and its application in Business- Strategic role of IT- Competing with IT, valuechain ,reengineering, virtual organization ,knowledge creation-Organizational Planning, The Scenario Approach, Planning for Competitive Advantage, SWOT Business Models and Planning, Business IT Planning, -Business/ ITStrategies and Business Application Planning- Developing and Implementing Business Systems - ImplementationChallenges- barriers - change management-: Case Studies

Unit 3
Management challenges-Security, Ethical and Societal Challenges- Ethical Responsibility of Business Professionals, Computer Crime, Privacy Issues, Health Issues, and Societal Solutions- Security Management of IT- Tools of security Management, Internetworked Security Defenses, other security measures –system controls and audits- Enterprise and Global Management of IT- Managing the IS Function and Failures in IT Management - Global IT Management, Cultural, Political and Geo-economic Challenges, Global Business/IT Strategies, Global Business/IT Applications,Global IT Platforms, Global Data Access Issues and Global Systems Development –Case studies

FREE ELECTIVES OFFERED UNDER HUMANITIES / SOCIAL SCIENCE STREAMSCOMMON TO ALL PROGRAMS

23CUL230	ACHIEVING EXCELLENCE IN LIFE -AN INDIAN PERSPECTIVE	L-T-P-C: 2-0-0-2

Course Objectives:

The course offers to explore the seminal thoughts that influenced the Indian Mind on the study of human possibilitiesfor manifesting excellence in life. This course presents to the students, an opportunity to study the Indian perspective of Personality Enrichment through pragmatic approach of self analysis and application.

SyllabusUnit 1
Goals of Life – Purusharthas
What are Purusharthas (Dharma, Artha, Kama, Moksha); Their relevance to Personal life; Family life; Social life & Professional life; Followed by a Goal setting workshop;
Yogic way of Achieving Life Goals – (Stress Free & Focused Life)
Introduction to Yoga and main schools of Yoga; Yogic style of Life & Time Management (Work Shop);Experiencing life through its Various Stages
Ashrama Dharma; Attitude towards life through its various stages (Teachings of Amma);

Unit 2
Personality Development
What is Personality – Five Dimensions – Pancha Kosas (Physical / Energy / Mental
/ Intellectual / Bliss); Stress Management & Personality; Self Control & personality; Fundamental Indian Values & Personality;
Learning Skills (Teachings of Amma)
Art of Relaxed Learning; Art of Listening; Developing 'Shraddha' – a basic qualification for obtaining Knowledge; Communication Skills – An Indian Perspective;

Unit 3
Developing Positive Attitude & Friendliness - (Vedic Perspective);
Achieving Work Excellence (Karma Yoga by Swami Vivekananda & teachings based on Amma);
Leadership Qualities – (A few Indian Role models & Indian Philosophy of Leadership);

REFERENCE BOOKS:
1. *Awaken Children (Dialogues with Sri Mata Amritanandamayi) Volumes 1 to 9*
2. *Complete works of Swami Vivekananda (Volumes 1 to 9)*
3. *Mahabharata by M. N Dutt published by Parimal publications – New Delhi (Volumes 1 to 9)*
4. *Universal message of Bhagavad-Gita (An exposition of Gita in the light of modern thought and Modern needs) by Swami Ranganathananda. (Vols.1 to 3)*
5. *Message of Upanishads, by Swami Ranaganathananda published by Bharatiya Vidya Bhavan, Bombay.*
6. *Personality Development – Swami Vivekananda published by Advaitha Ashram, Kolkatta.*
7. *Art of Man Making - Swami Chinmayananda published by Chinmaya Mission, Bombay*
8. *Will Power and its Development- Swami Budhananda published by Advaitha Ashram, Kolkatta*
9. *Ultimate Success - Swami Ramakrishnananada Puri published by Mata Amritanandamayi Math, Kollam*
10. *Yoga In Daily Life - Swami Sivananda – published by Divine Life Society*

23CUL231	EXCELLENCE IN DAILY LIFE	L-T-P-C: 2-0-0-2

Syllabus

Unit 1

1. The anatomy of 'Excellence'. What is 'excellence'? Is it judged by external factors like wealth?
2. The Great Flaw. The subject-object relationship between individual and world. Promote subject enhanceexcellence.
3. To work towards excellence, one must know where he is. Our present state... An introspective analysis.Our faculties within.

Unit 2

4. The play of the mind. Emotions – convert weakness into strength.
5. The indispensible role of the intellect. How to achieve and apply clear thinking?
6. The quagmire of thought.The doctrine of Karma – Law of Deservance.
7. Increase Productivity, reduce stress.. work patterning.

Unit 3

8. The art of right contact with the world. assessment, expectations.
9. Myths and Realities on key issues like richness, wisdom, spirituality.
10. Collect yourself, there is no time to waste. The blue-print of perfect action.

23CUL232	EXPLORING SCIENCE AND TECHNOLOGY IN ANCIENT INDIA	L-T-P-C: 2-0-0-2

OBJECTIVES:

This course offers a journey of exploration through the early developments in India of astronomy, mathematics, technologies and perspectives of the physical world. With the help of many case studies, the students will be equipped to understand concepts as well as well as actual techniques.

SyllabusUnit 1

1. General introduction: principles followed and sources;
2. Astronomy & mathematics from the Neolithic to the Indus civilization;
3. Astronomy & mathematics in Vedic literature;
4. Vedanga Jyotisha and the first Indian calendars;
5. Shulba Sutras and the foundations of Indian geometry;

Unit 2

1. Astronomy & mathematics in Jain and Buddhist literature;
2. The transition to the Siddhantic period; Aryabhata and his time;
3. The Aryabhatiya: concepts, content, commentaries;
4. Brahmagupta and his advances;
5. Other great Siddhantic savants;
6. Bhaskara II and his advances;

Unit 3

1. The Kerala school of mathematics;
2. The Kerala school of astronomy;
3. Did Indian science die out?;
4. Overview of recent Indian scientists, from S. Ramanujan onward;
5. Conclusion: assessment and discussion;

TEXTBOOK:
Indian Mathematics and Astronomy: Some Landmarks, by S. Balachandra Rao

23CUL233	YOGA PSYCHOLOGY	L-T-P-C: 2-0-0-2

OBJECTIVES:

This course offers the foundation necessary to understand Eastern approaches to psychology and spirituality. The course includes experiential components centering on meditation and spiritual practice.

SyllabusUnit 1
Introduction
Introduction to Modern Psychology
A short history of Modern Psychology - Major Schools of Modern Psychology - The three major forces in Western Psychology - Freudian Psychoanalysis; Behaviourism; Humanistic Psychology.

Introduction to Indian Psychology
What is Yoga? - Rise of Yoga Psychology tradition - Various schools of Yoga Psychology - Universal Goal of allYoga-schools.

Patanjali Yoga Sutra – 1
Introduction to Rishi Patanjali - Bird view of Yoga-Sutra - Definition of Yoga – Vrittis.

Patanjali Yoga Sutra – 2
Five Kinds of Vrittis - Pramanam - sources of right knowledge - Viparyayah – unfolded belief - Vikalpah – Unfoldedbelief - Smriti – Memory.

Unit 2
Patanjali Yoga Sutra – 3
Two formulae - Necessity of Abhyasah and Vairagyah - Foundation of Abhyasah - Foundation of Vairagyah.

Patanjali Yoga Sutra – 4
Introduction to Samadhi - Samprajnata-Samadhi - Reasoning in Samprajnata-Samadhi - Reflection in Samprajnata-Samadhi - Bliss in Samprajnata-Samadhi - Sense of Individuality in Samprajnata-Samadhi.

Patanjali Yoga Sutra – 5
Main obstacles in the path of Yoga - other obstructions - removal of obstacles by one – pointedness; by controlling Prana - by observing sense experience - by inner illumination - by detachment from matter - by knowledge of dream and sleep - by meditation as desired.

Patanjali Yoga Sutra – 6
How to make mind peaceful? - Cultivating opposite virtues: happiness – friendliness - misery – compassion - virtue – gladness - vice – indifference.

Patanjali Yoga Sutra – 7
Five causes of Pain - avidya – ignorance (Root Cause) - asmita – 'I-Feeling' – raga – attraction - dwesha – repulsion - abhinivesha – clinging to life.

Unit 3
Patanjali Yoga Sutra – 8
Necessity of Yoga practice - eight parts of Yoga practice - five Yamas: ahimsa – satya – asteya – brahmacharyam – aparigraha.

Patanjali Yoga Sutra – 9
Five Niyamas: Soucha – Santhosha – Tapas – Swadyah – Ishwara - Pranidhanam.

Patanjali Yoga Sutra – 10

Asanam – Pranayamah - various kinds of Pranayamah - Pratyaharah - Mastery over the senses. Report review Conclusion

23ENG230	BUSINESS COMMUNICATION	L-T-P-C: 1-0-3-2

OBJECTIVES:

To introduce business vocabulary; to introduce business style in writing and speaking; to expose students to thecross-cultural aspects in a globalised world; to introduce the students to the art of persuasion and negotiation inbusiness contexts.

Course Outcomes

CO1:   Familiarize and use appropriate business vocabulary and etiquettes in verbal communication in theprofessional context
CO2:   Understand organizational structures, pay structures and performance assessments
CO3:   Apply language skills in drafting various business documents and other necessary communications in thebusiness context
CO4:   Understand and address cross cultural differences in the corporate
environmentCO5: Participate in planned and extempore enactments of various business situations

23ENG231	INDIAN THOUGHT THROUGH ENGLISH	L-T-P-C: 2-0-0-2

OBJECTIVES:

To expose the students to the greatness of Indian Thought in English; to develop a sense of appreciation for the lofty Indian Thought; to develop an understanding of the eclectic Indian psyche; to develop an understanding about thesocietal changes in the recent past.

SyllabusUnit 1

Poems
Rabindranath Tagore's Gitanjali (1-10); Nizzim Ezekiel's Enterprise; A.K. Ramanujam's Small-Scale Reflections on a Great House.

Unit 2Prose
Khushwant Singh's The Portrait of a Lady; Jhumpa Lahiri's Short Story - Interpreter of Maladies.

Unit 3

Drama and Speech
Vijay Tendulkar's Silence, the Court is in Session; Motivational speeches by Jawaharlal Nehru/ S. Radhakrishnan / A. P. J. Abdul Kalam's My Vision for India etc. (any speech).

REFERENCES:
1. Lahiri, Jhumpa. Interpreter of Maladies, Harper Collins Publications, 2000.

23ENG232	INSIGHTS INTO LIFE THROUGH ENGLISH LITERATURE	L-T-P-C: 2-0-0-2

OBJECTIVES:

To expose the students to different genres of Literature; to hone reading skills; to provide deeper critical and literary insights; to enhance creative thinking; to promote aesthetic sense.

SyllabusUnit 1

Poems
1. W. H. Auden: Refugee Blues; 2. A. K. Ramanujan: Obituary; 3. William Blake: The LittleBlack Boy; 4. Gieve Patel: Grandparents at a Family Get–together.

Unit 2

Short Stories
1. Chinua Achebe: Marriage is a Private Affair; 2. Ruskin Bond: The Thief; 3. Isai Tobolsky: Not Just Oranges; 4.K A Abbas: The Refugee

Unit 3Prose
     1. A G Gardiner: On The Philosophy of Hats; 2. Robert Lynd: Mispronunciation

Practicals:

Role plays: The Proposal, Chekov / Remember Ceaser, Gordon Daviot / Final Solutions, Mahesh Dattani, Bookreviews, Movie reviews.

SUGGESTED READING:
The Old Man and the Sea, Hemingway / Any one of the novels of R.K. Narayan, etc.

| 23ENG233 | TECHNICAL COMMUNICATION | L-T-P-C: 2-0-0-2 |

OBJECTIVES:

To introduce the students to the elements of technical style; to introduce the basic elements of formal correspondence; to introduce technical paper writing skills and methods of documentation; to improve oral presentation skills in formal contexts.

Course Outcomes:

After the completion of the course the student will be able to:

CO1:   Understand and use the basic elements of formal correspondence and methods of documentationCO2:   Learn to edit technical content for grammatical accuracy and appropriate tone and style
CO3:   Use the library and internet recourses for research purposes
CO4:   Demonstrate the ability to communicate effectively through group mock-technical presentations and other activities

Mapping of course outcomes with program outcomes:

PO/PSO CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1										3				
CO2										3				
CO3				1										
CO4									3	3				

Syllabus:

Unit 1
Mechanics of writing: Grammar rules – punctuation - spelling rules - tone and style - graphical Representation.

Unit 2
Different kinds of written documents: Definitions – descriptions – instructions – recommendations - manuals -reports – proposals; Formal Correspondence: Letter Writing including job applications with Resume.

Unit 3
Technical paper writing: Library research skills - documentation style - document editing – proof reading – formatting.

Practice in oral communication and Technical presentations
