About the Symposium

The rapid advancement of Artificial Intelligence (AI) is significantly transforming financial decision-making processes across banking, investment, fintech, and corporate finance. AI-driven tools are enabling improved efficiency, predictive analytics, and strategic insights, thereby reshaping the digital financial ecosystem. This one-day symposium aims to provide a platform for academicians, industry practitioners, policymakers, and researchers to deliberate on the evolving role of AI in finance, including ethical, governance, sustainability, and regulatory challenges.
